DEVELOPING SCALABLE ENERGY PROJECTS ACROSS AFRICA

TRANSITIONAL GAS

Anchois Development Project

- The Anchois gas development, within Chariot's Lixus Offshore licence, has the potential to deliver 70 mmscfd of initial production into Moroccan and international gas markets.
- The appraisal and exploration well, Anchois-2, discovered excellent quality, dry gas across seven reservoirs with approximately 150m net pay.
- Consistent and high quality gas composition across all reservoir intervals allows for a simple subsea-to-shore development using conventional equipment, with first gas possible in 2024, subject to FID.
- Financing to be led by notable investment bank Societe Generale, while partnering opportunities are open for development and exploration acreage.

- Working in partnership with the Moroccan Government to help the Kingdom of Morocco meet its key national strategy of industrial development, economic decarbonisation, diversification of the energy mix and the reduction of its dependence on imported fuels.

Exploration Portfolio

- The Lixus Offshore licence exploration portfolio consists of low-risk, amplitude supported prospects, mapped across recently reprocessed 3D PSDM data, with a total resource base of over 4.5 TCF, underpinning longer-term growth potential.

- Chariot's new Rissana Offshore licence provides material running room in various plays including the extension of the Lixus Mio-Pliocene gas play, on-trend with the Anchois Gas Discovery, the Mesozoic play, which holds 3D prospects inherited from the legacy portfolio, and new exploration targets mapped on both 3D and extensive 2D datasets.

TRANSITIONAL POWER

Providing Renewable Power for Mines in Africa

Chariot Transitional Power works with companies to deliver highly competitive projects that reduce their operating costs, improve ESG performance, and secure a reliable and low-risk energy supply, even in remote and off-grid environments.

- One renewable project completed and operational with two in development.
- Total pipeline of mining projects heading towards 1GW, in what is an untapped market with significant power requirements and growth potential.
- Chariot has the right to invest between 15% and 49% into the co-developed projects and there is an ambition of both Chariot and Total Eren to collaborate on other non-mining energy projects and transactions in Africa.

Green Hydrogen Project

- In Mauritania, Chariot has been granted exclusivity over prime acreage to carry out feasibility studies with the intention of generating electricity from solar and wind resources to be used in electrolysis to split water to produce green hydrogen and oxygen.
- Benefiting from Mauritania's world class solar and wind resources, Project Nour has the potential to allow Mauritania to produce the cheapest green hydrogen in Africa and to become one of the world's main producers and exporters of green hydrogen and its derivative products, close to potential large European markets.

- Domestic benefits for Mauritania include providing baseload power to the national grid, diversifying industrial activities (e.g., green steel), promoting job creation and developing local infrastructure with the potential to have a significant impact on GDP.
- Chariot has signed an MoU with the Port of Rotterdam International, a global energy hub and Europe's largest sea port which handles a significant portion of Europe's energy demand. This MoU represents a first step towards establishing supply chains for the export of green hydrogen and ammonia.

AN AFRICAN TRANSITIONAL ENERGY GROUP

"During what has been a turbulent macro environment since the onset of the COVID-19 pandemic, I am very proud of the progress we have made across the business over the past year, as we continue to establish our transitional energy platform within Africa. Our mission is to create value and deliver positive change by investing in projects that are driving the energy revolution and we are fully committed to executing our plan."

Adonis Pouroulis
Chief Executive Officer

TRANSITIONAL GAS

ANCHOIS GAS DEVELOPMENT PROJECT

- Successful drilling campaign of the Anchois-2 well, completed safely, on time and on budget delivering a significant gas discovery.
- An accelerated field development plan underway as the Company looks to progress the front end engineering design ("FEED"), ahead of the final investment decision ("FID").
- Discovery exceeded expectations: 150m net pay confirmed across seven reservoirs, excellent quality and consistent dry gas composition which should enable a simple development.
- MoU on gas offtake and partnering signed with a leading international energy group.
- Societe Generale appointed as financial advisor to lead the project financing.
- Collaboration / FEED agreement in place with Subsea Integration Alliance to progress the front-end design, engineering, procurement, construction, installation and operation of the development project.
- Management focused on progressing towards material cash flows as quickly as possible.

Material upside potential:

- The drilling campaign also directly de-risked a material portfolio of prospects within the Lixus licence area.
- The Rissana Offshore licence, Morocco was signed in February 2022 which surrounds the Lixus acreage and captures gas play extensions from the Anchois wells.
- Potential for multi Trillion Cubic Feet ("TCF") volumes in deeper plays.

CHARIOT TRANSITIONAL POWER

RENEWABLE ENERGY FOR MINING PROJECTS

- Acquisition of AEMP completed in Q2 2021 with the AEMP team now fully integrated within Chariot's Transitional Power business.
- Projects are developed in strategic partnership with Total Eren, a global renewable IPP focused on low-risk mining power projects in Africa.
- The partnership was extended in January 2022 to cover a three year period, with an option to extend for a further two years thereafter. Chariot has the right to invest between 15-49% into the co-developed projects.
- This partnership is building up a pipeline of African mining power projects and looking to collaborate on other non-mining energy projects and transactions across the continent.
- First project in operation, a 15MW solar project, at the Essakane gold mine in Burkina Faso, successfully generating material returns.
- Two more projects signed in the post-period and in development:
 - » An MoU signed for a 40MW solar PV project with Tharisa Plc, to provide power to its chrome and PGM operations in South Africa.
 - » Partnership in place with First Quantum Minerals to advance the development of a 430MW solar and wind power project for its copper mining operations in Zambia – one of the largest renewable private sector energy projects in Africa.

GREEN HYDROGEN - PROJECT NOUR

- Exclusivity awarded over licences to develop a large scale green hydrogen project utilising renewable power to split water through electrolysis.
- Recent Pre-Feasibility Study confirms that Mauritania is exceptionally well-placed for green hydrogen production due to its unique solar and wind resources and the project has the potential to produce some of the cheapest hydrogen in the world.
- Domestic benefits for Mauritania include providing baseload power to the national grid, diversifying industrial activities (e.g. green steel), promoting job creation and developing local infrastructure with the potential to have a significant impact on GDP.
- Framework Agreement in place which defines the terms and guiding principles to pave the way for the in-depth feasibility study that will be undertaken over the next 24 months.
- Optimising project fundamentals through reducing acreage position to 5,000km² therefore allowing for a more focused scope
- MoU signed with the Port of Rotterdam International, a global energy hub and Europe's largest seaport which represents a first step towards establishing supply chains.
- Partnering process underway with the objective to form a world class consortium.

Other licences

- Whilst fully written down, Chariot has retained its interest in its licences in Brazil with no work commitments going forward and will host datarooms for interested parties as required.
- The Central Blocks in Namibia have expired but Chariot retains a 10% back in right in the Southern Blocks as a low risk future option.

Corporate

- Further to the successful equity fundraising of US\$25.5 million and \$4 million Open Offer announced in June 2022, the Company is well financed to take the Anchois Gas Project through to FEED and FID, in addition to progressing the Company's wider asset portfolio.
- Oversubscribed equity fundraising completed in December 2021.
 - » Year end cash position as at 31 December 2021 of \$19.4 million with no debt and minimal remaining work commitments.
- Senior leadership team fully aligned with shareholders, with the Board owning 9.57% of the shares in issue following June 2022 fundraising.

Outlook

Chariot is focused on:

- Delivering prompt FID on the Anchois gas development.
- Progressing towards production and material cash flows from Anchois as quickly as possible.
- Strategic partnering in Morocco to accelerate growth from a portfolio of high value, low risk upsides.
- Further development of the pipeline of Transitional Power projects.
- Evaluation of further value-accretive new ventures in line with the Company's focus on the theme of energy transition.

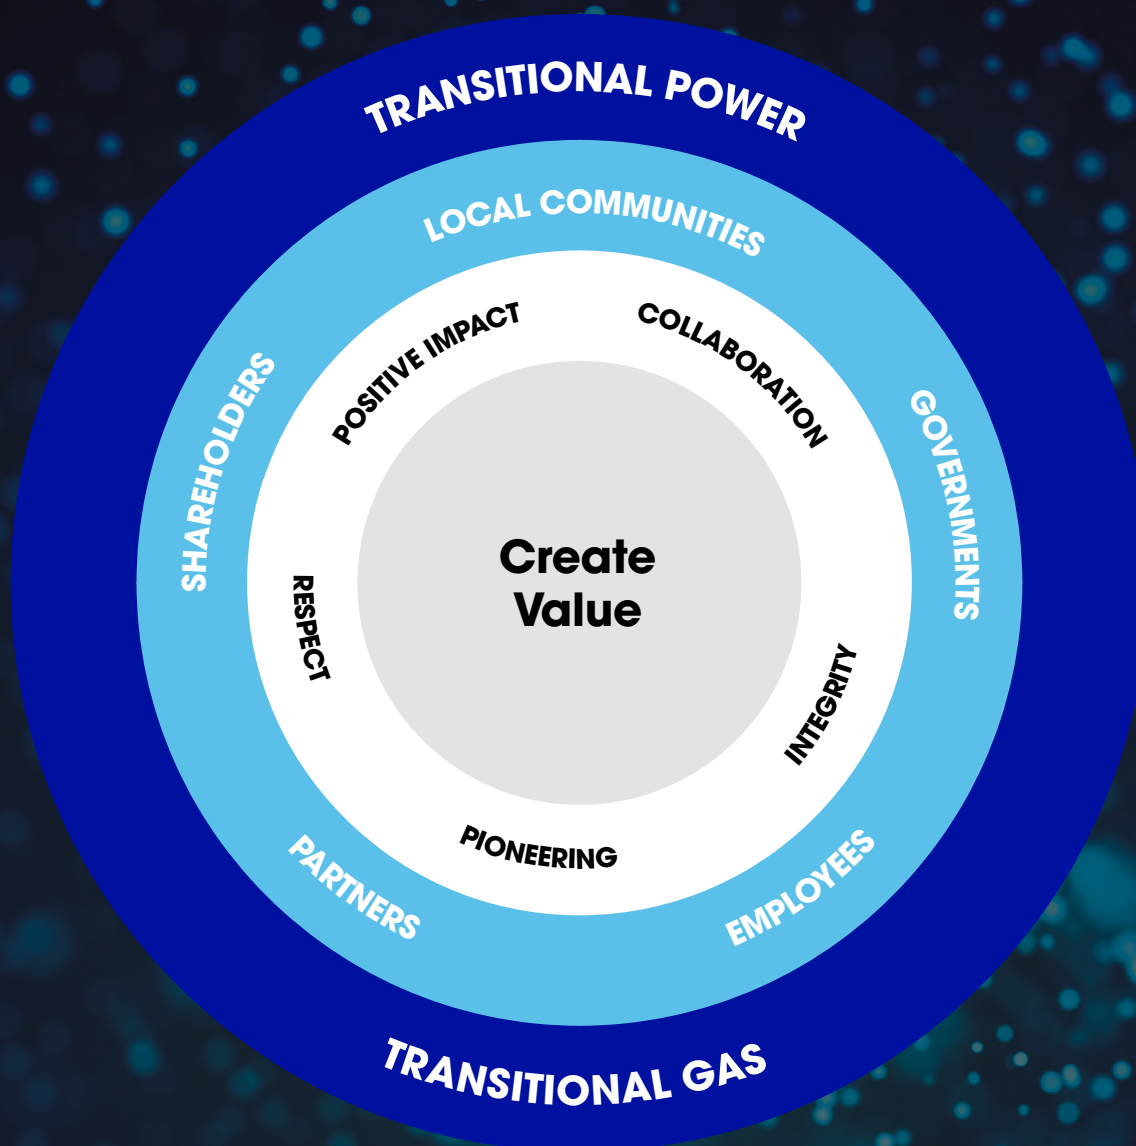

Adonis Pouroulis, Acting CEO of Chariot commented:

"During what has been a turbulent macro environment since the onset of the COVID-19 pandemic, I am very proud of the progress we have made across the business over the past year, as we continue to establish our transitional energy platform within Africa. Our mission is to create value and deliver positive change by investing in projects that are driving the energy revolution and we are fully committed to executing our plan. Through progressing and accelerating our gas development offshore Morocco we are looking to provide a gas hungry market with domestic supply; through our renewable power projects we are materially reducing the carbon emissions of mining operations in Africa and with our acreage in Mauritania, we are progressing what has the potential to be one of the world's largest green hydrogen projects and a key source of green energy in the future.

As a nimble and entrepreneurial team, we will also continue to leverage our network and utilise our expertise to seek out new ventures where we can play a key role and that fit within our ethos and strategy. We are excited about the potential that sits within our current portfolio, as well as opportunities that the future holds. We look forward to our ongoing progression and evolution as a company and we thank our shareholders for their ongoing support."

FOR A CLEANER ENERGY FUTURE

Chariot's focus is on securing and developing large-scale, first-mover positions in projects related to the energy transition, which can reduce carbon emissions, diversify the energy mix, support industrial development, and reduce dependence on imported fuels. Through development of this strategy, Chariot is looking to create value and deliver a wide range of positive impacts for its stakeholders.

POSITIVE IMPACT

Developing projects which make a real beneficial change to the **environment**, **shareholders** and the **local communities** by creating employment, facilitating energy independence and generating opportunities of progression and value.

RESPECT

Supporting a **culture** of **honesty** and responsible management through **engagement** in projects and partnerships that embody our values and demonstrate our vision.

COLLABORATION

Creating partnerships of **mutual benefit** and ensuring a **balance** between building constructive relationships and a sustainable business in an environment that inspires **knowledge growth**.

INTEGRITY

Operating with a team **trusted** throughout the industry for their **technical excellence** and **transparency**.

PIONEERING

Challenging convention and building momentum by fostering an innovative, **agile**, and **enterprising** philosophy.

OUR STAKEHOLDERS

STAKEHOLDER	ENGAGEMENT	POSITIVE IMPACT POTENTIAL
Local Communities 	<ul style="list-style-type: none"> Regular communication to outline Company's activities, potential impacts and mitigation efforts Education on project outcomes and potential benefits Consult on potential social investment and community projects to understand needs and perspectives Provide support to small and medium enterprises (SMEs) through local procurement 	<ul style="list-style-type: none"> Employment through job creation, training and skills development Contribute to the multiplier effect from project development Carbon credits can be registered with UN to raise funds for community development Development of energy infrastructure which can be of long-term value beyond the initial project phase
Governments 	<ul style="list-style-type: none"> Look to ensure alignment in developing national energy sectors Understand mutual goals and longer term vision Proactively work together to generate a wide range of benefits Work through the risks and impacts of development projects 	<ul style="list-style-type: none"> Development of infrastructure and establishment of supply chains Facilitate reduction of CO₂ emissions through development of energy mix and reduced reliance on heavy oil / fossil fuels – helping to achieve national decarbonisation goals Increase access to reliable and sustainable energy supply for population Contribute to country's GDP through range of development Encourage further foreign direct investment
Employees 	<ul style="list-style-type: none"> Foster an environment of knowledge, growth and development Communicate the Company's mission, vision and values Outline Company policies, ensure access to management where required Maintain open dialogue 	<ul style="list-style-type: none"> Provision of training opportunities and job development Equal opportunities for all head office and project staff Safe work environments
Partners 	<ul style="list-style-type: none"> Work together to identify mutual goals and the roadmaps to deliver them Understand partner objectives Ensure adherence to appropriate business practices Looking to contribute to carbon reduction targets 	<ul style="list-style-type: none"> Strengthen social licence to operate and to contribute to responsible mining credentials Reduction in carbon emissions targets Provide measurable ESG impacts
Shareholders 	<ul style="list-style-type: none"> Ensure regular updates on operations, financial performance and business strategy and vision Clear, consistent communications through a range of channels – press releases, webcasts, meetings and social media 	<ul style="list-style-type: none"> Allow shareholders access to information so they can make informed decisions Maintain investor relations and communicate feedback to management and Board members

"Chariot's business plan is indicative of our commitment to being a significant and successful part of the energy transition and we are proud of our positioning within this dynamic and critical sector."

CHARIOT'S TRANSITION

CHARIOT'S MISSION IS TO PLAY A LEADING ROLE IN SUPPORTING THE ENERGY TRANSITION AND SINCE 2020, OUR FOCUS HAS BEEN TO INCREASE OUR PROJECT EXPOSURE ACROSS THIS SECTOR.

We have made significant strides over the past 12-18 months and so have progressed our own transition – moving from high risk oil exploration to a broad portfolio of transitional energy projects that have the potential to be both transformational for the Company and deliver near-term value for all our stakeholders.

We have substantially expanded our remit and selection of energy projects. Within our Transitional Gas business, while maintaining our exploration vision, we are primarily focused on the development of a material offshore gas discovery in Morocco and are currently engaging front end engineering design ("FEED") to achieve final investment decision ("FID") as quickly as possible. Within our Transitional Power business we have recently signed up two new multi megawatt renewable energy projects in South Africa and Zambia in partnership with Total Eren, one of which is the largest private sector renewable development project on the continent to date. The pipeline is targeting over 1GW of traditional renewable projects by year end and is augmented by the maturation of Project Nour in Mauritania, a green hydrogen development with world class potential.

A DIVERSIFIED BUT THEMATIC PORTFOLIO

While our portfolio is diversified both in scale and resource base, our assets are linked through the themes that underpin our investment philosophy focused on the energy transition. In addition, all of our projects are scalable, demonstrably positive for all stakeholders, and at the same time focus on generating material returns for our investors.

ACCESS TO ENERGY

Access to energy is a universal need, a core pillar of the global economy, and something which benefits the pan African population. Our projects are aligned with helping host economies to achieve their growth and decarbonisation targets. This is a central tenet for Chariot, behind our remit to take large-scale and first-mover positions in projects that support the energy transition and can materially contribute to the energy mix. Our assets straddle the spectrum with natural gas, renewable power and green hydrogen interests and all have the potential to provide much needed and valuable sources of energy supply.

FOCUSED ON PROJECTS THAT ARE HIGHLY SCALABLE

All our assets are scalable and have significant upside potential. The Anchois development hub has a pre-drill resource of 2 TCF; the recent appraisal drilling has derisked a number of large resource prospects within the wider Lixus licence outlining the potential for multiple TCF volumes. Within the acreage surrounding Lixus in the Rissana licence, we have additional running room with additional giant prospective resources. For our Transitional Power business, the scale of the sub-Saharan mining sector is both vast and untapped with the power requirement estimated by the World Bank to be over 20GW in 2020. Last year our target was to secure a pipeline of power supply projects of 500MW, however, we have now doubled our scope and target reaching 1GW by the end of 2022. The hydrogen market is already becoming a key component of the energy transition with Goldman Sachs estimating a €10 trillion market by 2050. While still nascent, we believe hydrogen will be a foundational energy source of the future and are progressing our initial project in Mauritania that has the potential to produce 10GW by 2030.

SUSTAINABLE ENERGY - HELPING TO MEET CARBON EMISSION TARGETS

Morocco has ambitious sustainable development targets, currently aiming for a 45.5% reduction in their greenhouse gas emissions by 2030, as part of their contribution to the Paris Agreement. At the same time, Morocco's growing economy and increasing demand for energy is currently supplied mostly by energy imports and coal. The domestic supply of gas from Chariot's Anchois project can help provide baseload requirements and could therefore be an important contributor to rebalancing Morocco's energy mix and assist in reducing Moroccan emissions going forward.

Mining companies are increasingly focused on reducing their carbon outputs and have also set out key targets in this regard. Implementing long-term cleaner energy solutions is now high on operational ESG agendas across the sector. Through partnering with Chariot and Total Eren to build, finance and operate their energy solutions, these companies are provided with a renewable, measurable supply to help enable them to meet their goals.

Green hydrogen also has the potential to supplement and replace traditional fossil fuels in both power generation and manufacturing processes, leading to a significant reduction in associated emissions of greenhouse gases. Hydrogen also has the potential to stimulate the development of greener primary industry (such as green steel and green ammonia production) and can lead to significant, positive long-term impacts for Mauritania as well as the entire global energy transition.

ENERGY SECURITY

Energy security has become a key topic within the current geopolitical backdrop. The Anchois gas project is expected to provide a reliable domestic supply which would bolster Morocco's self-sufficiency and drive further development of its energy related infrastructure. Chariot's renewable power projects build bespoke onsite solutions for mining companies, often sited in locations well away from power grids. Accessing wind and solar power for use directly on the mine sites removes the dependence on and need for transportation of carbon heavy fuel to remote destinations. The development of Project Nour's green hydrogen will provide baseload power to Mauritania's national grid as well as opening broader development possibilities. Future demand is also growing as a result, as evidenced by the European Commission recently quadrupling its 2030 hydrogen target to 75GW by 2030, half of which will be imported.

OUTLOOK

Chariot's business plan is indicative of our commitment to being a significant and successful part of the energy transition and we are proud of our positioning within this dynamic and critical sector. We remain ambitious with our plans to expand and build on our achievements to date as we continue to evaluate new ventures that fit within our strategy. As ever, we are grateful to our investors, partners, and the local communities we are involved in, for their support during what was a significant period of change and growth for us as a business. We look forward to providing further updates on our exciting pipeline of projects over the remainder of 2022 and beyond.

George Canjar
Chairman

21 June 2022

THE TRANSITIONAL ENERGY OPPORTUNITY:

SCALE OF DEMAND FOR POWER IN AFRICA

Africa's population is expected to grow significantly from 1 billion to approximately 2.5 billion people in the next 25 years.

Currently, only around 50% of this population have access to electricity, so there is both a real need and demand for energy to look to close this substantial energy gap and enable ongoing development through providing accessible, sustainable energy across the continent.

Chariot sees the scale of the opportunity to help meet this demand and the Company is extremely well placed to support the communities across Africa through delivery of transitional energy, via Chariot's Transitional Gas and Transitional Power assets.

PROJECTED WORLD POPULATION BY WORLD REGION

Source: UN

WHY TRANSITIONAL ENERGY

Transitional energy is a key part of the global movement to decarbonise and move towards a carbon neutral future. Importantly, the global energy transition should be both fair and inclusive and we are looking to harness the unique natural resources that Africa is endowed with to look to provide cleaner, sustainable supplies of energy.

This provision of energy in turn provides access to a range of development opportunities, job creation, infrastructure and alleviation of poverty, as well as opening up the possibility to develop cleaner and greener industries.

Chariot continues to establish a solid transitional energy platform within Africa, and we are fully committed to deliver positive change through investment in projects that are driving this energy revolution. Through progressing and accelerating our gas development offshore Morocco we are looking to provide a gas hungry market with domestic supply. Through our renewable power projects we are materially reducing the carbon emissions of mining operations in Africa and with our acreage in Mauritania, we are progressing what has the potential to be one of the world's largest green hydrogen projects.

As a nimble and entrepreneurial company Chariot will continue to leverage its network and expertise to seek out new ventures where we can play a key role and that fit within our ethos and strategy. We are excited about the potential that sits within our current portfolio, as well as opportunities that the future holds.

TRANSITIONAL GAS

Transitional Gas is an exploration and development business geared towards producing domestic gas for African countries, relieving dependency on energy imports, thereby lowering import bills and promoting self-sufficiency.

POSITIVE IMPACT

TRANSITIONAL POWER

Transitional Power is a hybrid renewable energy developer and independent power producer, working in partnership with Total Eren to provide clean energy to mining companies in Africa. Chariot is also progressing a potential 10GW green hydrogen project in Mauritania.

ACCELERATING PROGRESS

CHARIOT TRANSITIONAL GAS

From imported coal reliance to domestic gas in Morocco

- Chariot operates the Anchois Gas Development Project with 75% equity offshore Morocco, working towards switching the supply of energy and power from a carbon intensive imported coal base (currently 67% imported) to a cleaner-burning natural gas
- This gas production is a flexible fuel for power generation, as it has a role as 'enabler' for renewables projects by providing the critical balancing/peaking power to allow the delivery of consistent power to end customer
- Morocco has an easily accessible, scalable and attractive gas market and Lixus has close proximity to the Maghreb-Europe Gas pipeline ("GME"), which connects Morocco with Spain and Portugal, offering numerous commercial options to monetise the resources
- Highly scalable with material upside beyond the Anchois Development. Pre-drill Anchois area hub best estimate total remaining recoverable resources of around 2 TCF and additional exploration upside in Lixus and Rissana, providing potential to deliver material gas resources for long-term growth
- Near-term cash flows with fast-track development plan; rapid progress being made in country to market the gas with a Memorandum of Understanding for key terms signed

CHARIOT TRANSITIONAL POWER

Power enabling the reduction of HFO in mines

- Chariot owns a 10% share of the 15MW solar project at the Essakane gold mine in Burkina Faso
- Essakane, like many other mines in Africa, runs on carbon intensive Heavy Fuel Oil; the project replaces part of this fuel with clean solar energy
- This project was registered to the UNFCCC with a confirmed 18,000 Certified CO₂ Emission Reductions credited every year
- The project contribution to sustainable development has been recognised by the "2019 Towards Sustainable Mining" excellence award
- The Essakane PV Plant spends 1% of its income to fund projects such as tree planting campaigns, distribution of solar kits to schools, and contributed to the funding of a new school for the communities around Essakane
- Chariot recently secured two further project developments in South Africa and Zambia, with plans to continue to expand footprint alongside partner Total Eren

OUR JOURNEY

2020

- Shift in strategy to widen scope of portfolio and diversify business towards developer and operator

2021

- Acquisition of AEMP: Renewable and Hybrid Power Developer focused on Mining Sector in Africa
- Gas market MoU signed with ONYHM
- Collaboration with Subsea Integration Alliance on development plans for Anchois
- Anchois appraisal and exploration drilling campaign design with rig mobilisation and drilling commenced by year end
- Successful fundraises completed to advance project portfolio
- Progressed partnership with Total Eren to extend equity stake in renewable projects
- Secured large acreage position for the "Project Nour" green hydrogen project in Mauritania

2022

- Successful drilling campaign completed with significant gas discovery at Anchois-2; post-well results exceeding expectations, fast tracking the Anchois FEED project
- Developing Transitional Power mining project pipeline
- Commencing feasibility studies for Project Nour
- Ongoing new venture and strategic partnering evaluation
- Furthering gas sales agreements and appointment of debt finance advisor

2023

- FID expected early 2023 with ongoing portfolio development
- 2D seismic acquisition project in Rissana Offshore
- Continue to develop renewable projects and expand pipeline

2024/2025

- Completion of feasibility studies on Project Nour
- Targeting first gas from the Anchois Gas Project

"It will take time and significant investment to bridge the energy gap but this is exactly what Chariot is about and we are focused on this through our Transitional Gas and Power businesses."

Adonis Pouroulis
Acting Chief Executive Officer

Green Hydrogen Potential

THE ENERGY TRANSITION

TRANSITIONAL ENERGY IS FUNDAMENTAL TO THE GLOBAL MOVEMENT TOWARDS A CARBON NEUTRAL WORLD.

The adoption of cleaner, sustainable energy is an integral part of achieving net zero goals and this transition needs to facilitate positive change by reducing emissions whilst enabling growth and development. This also goes hand in hand with another important global objective, of providing access to electricity to all.

We are an African focused transitional energy company. To deliver on our business strategy, we need to find solutions that are suitable for purpose within the context of Africa's development needs both now and over the longer term, within the framework of overarching climate goals, and importantly driving the energy transition utilising the continent's natural resources in a fair and inclusive way.

THE OPPORTUNITIES WITHIN THE AFRICAN ENERGY GAP

Currently there are over 600 million people without access to electricity in Africa, and the population is expected to roughly double from around 1.25 billion to approximately 2.5 billion people in the next 25 years. This establishes a sizeable and growing market but highlights the stark inequality of those with and without and, as history has shown, one of the first pillars of alleviating poverty is to provide affordable power. Every effort can be aligned to reducing Africa's carbon footprint but within the continent it is simply impracticable to eradicate emissions entirely at this point in time. It is also clear that a wide range of energy sources are needed to enable development and ensure accessibility for all. Looking to address this energy gap is a real opportunity however, and we are focused on rebalancing the energy mix for two reasons – both to meet the development needs of growing populations, but importantly through doing this, help to accelerate the transition of Africa's economy towards carbon neutrality and ability to access cleaner and greener technologies.

Crucially, further adoption of transitional energy sources should be aligned with an individual country's ambitions to ensure that each country's resources help meet the needs of their people and industries in a long-term, sustainable way. Through identifying and developing their resource wealth alongside them we can facilitate affordable, sustainable energy supplies that can enrich the lives of many, deliver wide ranging tangible positive impacts and create value for all stakeholders.

It will take time and significant investment to bridge this energy gap but this is exactly what Chariot is about and we are focused on this through our Transitional Gas and Power businesses.

TRANSITIONAL GAS:

Our significant Anchois gas discovery offshore Morocco took the headlines of our successful drilling campaign announced in Q1 2022, but to have completed this drilling programme on time, safely and within budget working around the constraints of COVID which impacted travel and supply chains at the time was a notable achievement. Our management team and contractors worked tirelessly on the planning and execution of these activities and I would like to once again extend my thanks to all involved.

The results of the drilling programme exceeded our expectations, encountering all appraisal and exploration targets, confirming the presence of consistent, excellent quality dry gas, and enabled Chariot to report a material upgrade of the net gas pay estimates. Due to the nature of the gas, the project lends itself to a simple development, using conventional technology and the campaign also served to substantially de-risk other targets within the Lixus licence. We will be announcing independent third party validation of Anchois resources through a CPR shortly.

In February 2022, we also captured further upside through the signing of the Rissana licence which surrounds Lixus and has giant potential due to the gas plays that extend into this acreage. We are also very pleased to have signed an MoU with a leading international energy group on gas offtake and partnering.

We are now focused on bringing the Anchois gas project online as quickly as possible and we have appointed Societe Generale to take the lead on the project financing. We successfully raised US\$25.5 million via an oversubscribed Placing and \$4 million via an Open Offer post period and we are fast-tracking the engineering and design of the Anchois development together with Subsea Integration Alliance to reach FID as quickly as possible so we can start to generate the material cash flows that we expect from the project.

TRANSITIONAL POWER:

Providing Renewable Power in Africa

It has been a pleasure to work with Total Eren, a leading player in the renewable energy industry since we acquired the AEMP team in 2021. We were pleased to further strengthen our relationship, by extending our partnership terms for a further three years with an option for an additional two thereafter. We are also now able to invest up to 49% in each new project and were delighted to secure new partnerships with Tharisa and First Quantum in the first half of this year to develop substantial hybrid power sites for their operations in South Africa and Zambia. Our focus is to deliver reliable, low cost power solutions that have a wide range of positive ESG impacts for both the companies and the communities in which they operate. Operations from the 15MW solar power plant at the Essakane mine in Burkina Faso, in which we

hold a 10% equity stake, continue to generate a number of measurable impacts, including saving 6 million litres of fuel and a reduction of 18,500 in CO₂ emissions per year which exemplifies the proof of concept and underlines the benefits that can be realised from such projects. Tapping into these natural resources and attracting this renewable focused investment is beneficial for the countries as well as playing a positive part in a company's ESG remit. We are currently looking at strategic partnering within the Transitional Power business to provide equity finance directly into these projects and alongside Total Eren we are looking at other renewable energy projects across the continent.

Green Hydrogen – a strategic priority

We are delighted to have secured a strategic position in Mauritania and we now have a foothold in what we believe will be the next frontier for the energy sector. Our acreage is in a prime location for both wind and solar power and we believe we have obtained a critical first mover advantage in Africa. Mauritania is exceptionally well placed for green hydrogen production which requires four key characteristics: wind power, solar radiation, land and water. Mauritania has these in abundance and the scale of this combination is relatively rare across the globe. As a result, Project Nour has the potential to become one of largest and lowest cost producers of green hydrogen in the world. This was recently confirmed by our Pre-Feasibility Study and a Framework Agreement is now in place which provides a roadmap for the next phases of development. As part of the Framework Agreement, we have optimised our positioning for the project and reduced our acreage position to 5,000km² to enable us to focus our efforts, whilst retaining the potential for 10GW output capacity. We are currently in discussions with interested parties with a view to forming a world class consortium to take this project forward. The range of potential benefits for Mauritania and the region as a whole are extensive and we are delighted to be partnering with the Government of Mauritania on this project. We thank the Government of Mauritania for their continued collaboration and cooperation on Project Nour.

Positive impacts

Another element of the energy transition story is mitigating and developing resilience to the impacts and challenges of climate change and investment into the projects that can deliver significant benefits in this regard. Accessing and sharing power can help to protect against shortages of water and power supply and Zambia is a great example with First Quantum's project representing a natural fit with Zambia's hydropower resource seasonality. This is also true of the complementary wind and solar resources in Mauritania, which generate power around the clock, with solar produced during the day and wind mainly at night.

Across all our projects there are common attributes of the energy that we look to supply – reliable, affordable sources of power that can help reduce carbon footprints and also enable diversification of wider industrial activities and downstream development.

Whilst our projects will produce valuable power for domestic use, there is also direct access to export markets to generate further revenues. With a direct pipeline into Spain from Morocco and access to markets from Mauritania through the Port of Rotterdam, supply chains are already being established, which is a key benefit to the projects' locations in the vicinity of Europe, as well as having access to the wider African continent. A feature of transitional power projects is the potential for local communities to benefit from surplus supply from the mine sites and also potentially inherit the assets at the end of life of mine.

Chariot's projects can help our partners and mining companies meet their responsibility objectives. For Governments, these projects could have a significant impact on accelerating growth and GDP and for shareholders – with whom we are aligned having supported recent fundraisings – all these positive impacts have the potential to drive significant value creation.

As our business develops, we are committed to continually improving our approach and actively managing and looking to mitigate our ESG risks and impacts. We adopt the IFC Performance Standards, the Equator Principles and the applicable UN Sustainable Development Goals as guiding principles across our business and we will continue to strive to achieve best practice throughout our operations.

CONCLUSION

I would like to take this opportunity to thank ONYHM in Morocco, the Government of Mauritania and all our valued partners, including the Ministries in Namibia and Brazil, for their ongoing support and collaboration, the Chariot Board and our team for their dedication, commitment and enthusiasm and our shareholders for their ongoing support. Our mission is to create value and deliver positive change through investment in projects that are driving the energy revolution and we are fully committed to executing this. As a nimble and entrepreneurial company we will continue to leverage our network and utilise our expertise to seek out new ventures where we can play a key role and that fit within our ethos and strategy. We are excited about the potential that sits within our current portfolio, as well as opportunities that the future holds. We look forward to our ongoing progression and evolution.

Adonis Pouroulis
Acting Chief Executive Officer

"There is much hard work ahead as we enter into the next phases of our project developments but we move forward encouraged and emboldened by our progress and shareholder support to date."

Julian Maurice-Williams
Chief Financial Officer

HIGHLIGHTS

US\$29.5m

Raised Post Period

Well Capitalised

No Debt

FUNDING AND LIQUIDITY AS AT 31 DECEMBER 2021

The Group entered 2022 with cash of US\$19.4 million as at 31 December 2021 (31 December 2020: US\$3.7 million) and no debt.

The proceeds of US\$5 million raised from the issue of underwriting shares to Magna Capital LDA in the post-period, as well as the equity fundraising completed in June 2022 of US\$ 29.5 million means the Group is well capitalised to execute the next phase of its strategy to both monetise the high value Anchois gas development project and progress its highly scalable Transitional Power stream and early stage green hydrogen project.

An extensive cost reduction programme in 2020 provided Chariot with a lower cost base and leaner foundation whilst still retaining operational capability. This leaner foundation has been built upon throughout 2021 as the Company has grown its presence in Morocco and acquired a renewables business. During 2021, the Group invested c.US\$12 million into the business through its successful appraisal and exploration drilling campaign in Morocco, acquisition of the AEMP business and administration activities (31 December 2020: c.US\$6 million).

As at 31 December 2021, US\$5.4 million of the Group's cash balances were held as security against licence work commitments. The increase from US\$0.5 million at 31 December 2020 was due to an increase in Moroccan bank guarantees.

FINANCIAL PERFORMANCE - YEAR ENDED 31 DECEMBER 2021

The Group's loss after tax for the year to 31 December 2021 was US\$7.0 million, a decrease of US\$63.6 million on the US\$70.6 million loss incurred for the year ended 31 December 2020 which was driven by an impairment charge of US\$66.7 million recorded against the full book value of Namibian and Brazilian exploration assets. This equates to a loss per share of US\$(0.01) compared to a loss per share of US\$(0.19) in 2020.

The share-based payments charge of US\$0.8 million for the year ended 31 December 2021 was US\$0.6 million higher than the US\$0.2 million in the previous year due mostly to the granting of employee and Directors' deferred share awards in the current year.

Other administrative expenses of US\$5.7 million for the year ended 31 December 2021 are higher than the previous year's US\$3.7 million driven mainly by business development projects and acquisition costs as the Company looked to expand across its Transitional Gas and Transitional Power business units, combined with costs of pre-feasibility studies expensed on the green hydrogen project.

Finance expenses of \$0.5 million (31 December 2020: income of US\$0.5 million) relate to the holding of cash balances in Sterling to meet administrative expenses in the current year resulting in higher foreign exchange losses, inclusive of US\$0.1 million (31 December 2020: US\$0.1 million) unwinding of the discount on the lease liability under IFRS 16.

EXPLORATION AND EVALUATION ASSETS AS AT 31 DECEMBER 2021

Having impaired the non-core exploration activities in Namibia and Brazil in 2020, the increase in carrying value of the Group's exploration and evaluation assets in 2021 relates entirely to the Morocco geographic area reflecting US\$18.9 million invested in the successful appraisal and exploration drilling of Anchois and other licence costs which were capitalised.

BUSINESS ACQUISITION - AEMP

In June 2021 the Company completed the acquisition of the business of Africa Energy Management Platform ("AEMP") which has been accounted for as an acquisition of a business under IFRS 3. Accordingly, at acquisition the total identifiable assets and liabilities assumed were US\$0.5 million, the majority of which was attributable to the 10% project equity held in the operational Essakane power project. The balance of the consideration of US\$0.4 million at the time of acquisition was allocated to goodwill. No impairment of the investment in power projects or goodwill was identified in the period from acquisition to 31 December 2021.

The total consideration payable was US\$0.9 million, of which US\$0.1 million was paid in cash, US\$0.7 million in new ordinary shares issued and US\$0.1 million as deferred consideration payable in equity (shares to be issued reserve). Further contingent payments relating to the acquisition will be recognised as share-based payments and a charge of US\$0.1 million has been included in the period to 31 December 2021.

Post the year end two Memorandum of Understandings ("MoUs") were announced indicating the value that is already being generated from the acquisition, with a 40MW solar project to sell solar power to the Tharisa mine in South Africa and a 430MW project to sell low carbon energy to First Quantum Minerals' mining operations in Zambia. Both projects are large scale, early stage and are in partnership with Total Eren, with no commitments in the near term.

OTHER ASSETS AND LIABILITIES AS AT 31 DECEMBER 2021

In 2021, wellheads and casing valued at a total of US\$1.2 million were held in inventory relating to the Anchois drilling campaign in Morocco, as compared with Nil at the end of 2020, when inventory disposed of for scrap value had resulted in a charge of US\$0.5 million to the income statement.

As at 31 December 2021, the Group's net balance of current trade and other receivables and current trade and other payables shows a net current liability position of US\$14.2 million (31 December 2020: US\$0.2 million) with the increase due primarily to outstanding payables for the Moroccan drilling campaign.

Under IFRS 16 the Group has recognised a depreciating right-of-use asset of US\$0.3 million (31 December 2020: US\$0.7 million) and a corresponding lease liability based on discounted cash flows of US\$0.4 million (31 December 2020: US\$0.8 million), with the reductions resulting from depreciation and rental commitments paid that are partially offset by unwinding of the discount on the lease liability.

OUTLOOK

The recent announcement of Societe Generale being appointed to lead debt financing of the Anchois gas project in Morocco demonstrates the project's bankable economic fundamentals. We are pleased to be part of the solution to Morocco's domestic energy needs and a part of the wider European supply.

The fundraise completed in June 2022 of US\$29.5 million means Chariot is funded to accelerate the FEED programme to FID, and fast-track to cash flows from production into the gas hungry Moroccan and European markets. There is much hard work ahead as we enter into the next phases of the project including negotiations on gas sales and project finance but we move forward encouraged and emboldened by a highly successful drilling result which has potentially opened up a new gas basin and a much larger resource base than pre-drill estimates had planned for. We are equally enthused by the progress being made in the Transitional Power business as two world class projects have already been announced in early 2022 which demonstrate the bank of projects in the pipeline being accelerated in partnership with Total Eren. We will also look to strategically partner at the subsidiary level within the Transitional Power business.

Julian Maurice-Williams
Chief Financial Officer

21 June 2022

CREATING SUSTAINABLE VALUE

"Highly successful appraisal and exploration drilling campaign reaffirms our operating capabilities and the positive results lay the foundations for a valuable gas development project and also unlock material longer-term growth from a basin-scale exploration portfolio."

SIGNIFICANT GAS DISCOVERY AT ANCHOIS-2 IN 2022

OVERVIEW

Chariot has operated upstream projects in Morocco since 2013, with the current portfolio now comprising the Lixus Offshore and Rissana Offshore licences.

Lixus Offshore was awarded in 2019, secured after our team re-assessed the commercial potential of the on-block Anchois gas discovery (made in 2009) and identified a low-risk follow-on portfolio in the same play system. Following the reprocessing and reinterpretation of 3D seismic data, Anchois was estimated to contain 361 Bcf of 2C Contingent Resources, by independent assessment from NSAI in 2020. With 75% working interest (operator), Chariot works alongside partners Office National des Hydrocarbures et des Mines ("ONHYM"), who hold a 25% carried interest in the 1,794km² area licence block.

The Anchois-2 appraisal and exploration drilling campaign was successfully completed in January 2022 with operations being conducted by the Chariot team, safely, on time and on budget. The well encountered the previously discovered A & B gas sands, confirming the extension of the gas bearing intervals, and identified new gas-bearing reservoirs in the lower B sands and also in the C, M and O sands exploration objectives.

In 2022, Chariot was awarded the Rissana Offshore licence (as operator with 75% interest, ONHYM 25%), an extensive licence area of ~8,500km², fully encompassing the maritime borders of Lixus, thereby capturing the upside potential of the proven gas bearing tertiary fairways at Anchois, as well as providing exciting new play opportunities.

ANCHOIS DRILLING RESULTS

An appraisal campaign was initiated on the Anchois gas field in December 2021, led by Chariot's Group Drilling Manager David Brecknock and a highly experienced team including many personnel from our previous drilling campaign in Namibia in 2018. This campaign comprised a new appraisal and exploration well, Anchois-2, with additional plans to assess the potential of the original Anchois-1 discovery well to be a producer in any subsequent development of the field.

The Anchois-2 well was drilled to a Total Depth (TD) of 2,512m by the Stena Don semi-submersible drilling rig in 381m of water. Following a comprehensive pre-campaign design and planning phase, the drilling operations were completed in 31 days, which is approximately half the time of the original discovery well. Of particular importance was the drilling efficiency, which allowed all the reservoir objectives to be drilled in a single hole section, with TD reached in 17 days from the rig arriving on location, permitting a single comprehensive wireline evaluation programme across all reservoir zones. The operations were conducted on time and on budget, during heavy travel restrictions due to the COVID pandemic, including the emergence of the Omicron variant, demonstrating the nimbleness and exemplary contingency planning from the team.

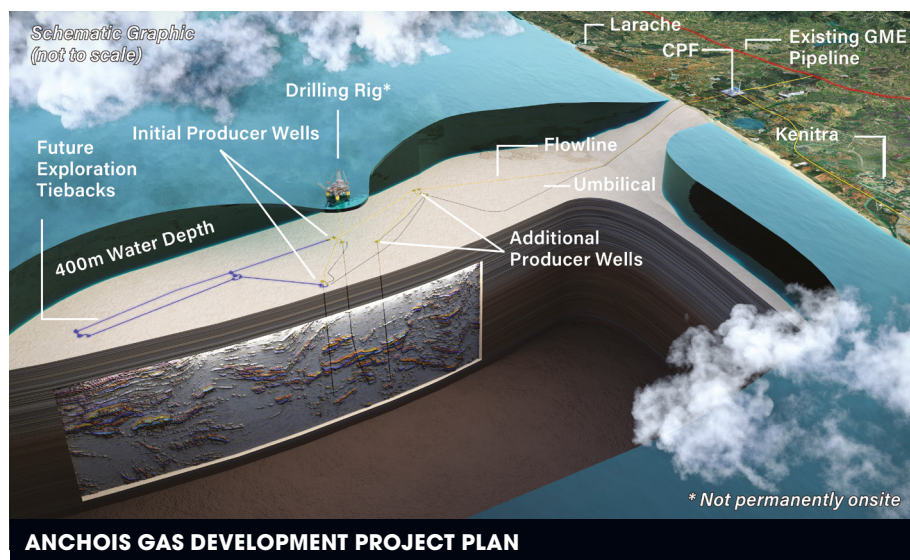

In the appraisal objectives, the well successfully encountered the A and B gas sands, discovered in the original Anchois-1 well. This demonstrated the extension of these accumulations and permitted recovery of important subsurface data missing from the original well, such as reservoir pressures and gas samples from the A sand interval, considering the well was not optimised for an evaluation of that interval. Within the primary objective, the B gas sands, a new "lower B sand" reservoir was encountered, with a deeper gas-water contact ("GWC") than seen in the original well. Porosity and permeability confirmed good reservoir quality, consistent with Anchois-1, with over 55m of net gas pay identified in the Anchois-2 B sands from subsurface data, comparing favourably to the original well which had 33m of net gas pay in the B sands.

In the exploration objectives, the well successfully identified new discoveries in the C, M and O gas sands. Of these, the C and M sands were the primary pre-drill targets at this location and related to thin gas pays and water-bearing sands in the Anchois-1 well, respectively. Chariot's interpretation of the reprocessed seismic data identified locations within the Anchois structure where the seismic attributes suggested that reservoir quality improved in the C sands and that the M sands could be gas-bearing in an up-dip location. These reservoirs were found to be entirely gas-bearing and thicker than pre-drill expectations.

Drilling continued into the O sands, largely as a stratigraphic test to confirm the presence of reservoir since this location was not optimised to test a specific closure. However, gas-bearing reservoir zones were encountered, above a thick section of good porosity, water-bearing reservoir, which continued to TD.

Data acquired from subsurface electrical logging underpins our understanding of the reservoir and fluid properties. A comprehensive evaluation of the well was undertaken through wireline logging, subsurface formation testing, including reservoir pressures and gas sampling, sidewall cores, and well bore seismic profiles. The data acquired from the well were analysed through a post-drilling evaluation programme, resulting in a total calculated net gas pay of approximately 150m, compared to 55m in the original Anchois-1 discovery well. Additionally, the gas sampled within the seven gas-bearing zones were found to be of high quality, with a consistent composition throughout the well, with >96% methane (dry gas) and without problematic impurities such as hydrogen sulphide or carbon dioxide.

Anchois-2 was suspended for potential future re-entry and completion as a production well in the development of the field. Subsequent to the Anchois-2 operations, the Anchois-1 gas discovery well integrity was assessed also left suspended for future potential re-entry as a producer.

DEVELOPMENT PLAN

As part of the initial exploration period work commitments on Lixus, and in anticipation of the appraisal drilling campaign, Chariot performed pre-FEED studies on a development of the Anchois field with Xodus in 2020. This work validated the subsea-to-shore development concept for the Anchois gas field and was used to estimate development costs and schedule to support the economic viability of the project. In early 2021, Chariot entered into a Collaboration Agreement with the Subsea Integration Alliance (SIA), a non-incorporated alliance of leading gas development contractors, with the aim of the SIA and Schlumberger supplying front-end engineering and design (FEED); engineering, procurement and construction (EPC); and operations and maintenance (O&M) for the Anchois development project. These activities laid the foundations for the opportunity of a fast-track development programme, prior to success at Anchois-2.

Following the drilling campaign, Chariot is now focused on progressing with a development plan for the Anchois gas resources, including both the original gas sands and potentially also the newly discovered reservoirs, considering that the consistent high quality gas composition would allow all reservoirs to be developed through the same infrastructure. This plan considers an initial development with two or more subsea producers tied to an onshore Central Processing Facility ("CPF") with the capacity to process 70 mmscfd. An onshore pipeline would connect the CPF to the existing Maghreb-Europe gas pipeline, giving access to both Moroccan domestic markets and export routes into Spain.

Activity for the remainder of 2022 will include FEED engineering on all aspects of the development, including drilling and completion, subsea production systems, offshore flowline and umbilical, onshore gas processing plant and the onshore export pipeline. One of the benefits of working with the SIA is the ability to utilise standardised equipment and to shorten cost and timing uncertainty associated with engineering and procurement activities.

GAS COMMERCIALISATION:

In Morocco, alongside a growing renewable power programme, imported fossil fuels dominate and the country relies on imports for over 90% of its primary energy needs. The Maghreb-Europe Pipeline ("GME") was a key import route for Morocco from Algeria for power generation, with domestic power stations at Ain Beni Mathar and Tahaddart consuming up to 100 mmscfd since 2012, representing approximately 10% of Morocco's national power generation capacity. However, at the end of October 2021, the long-standing gas sales agreement between Morocco and Algeria ended, meaning the loss of gas supply to those power plants.

With the potential to provide material local gas production, Chariot's projects fit in with the Kingdom of Morocco's national strategy of industrial development, economic decarbonisation and diversification of the energy mix, allowing the reduction of dependency on imported fuels for both power generation and industrial consumption.

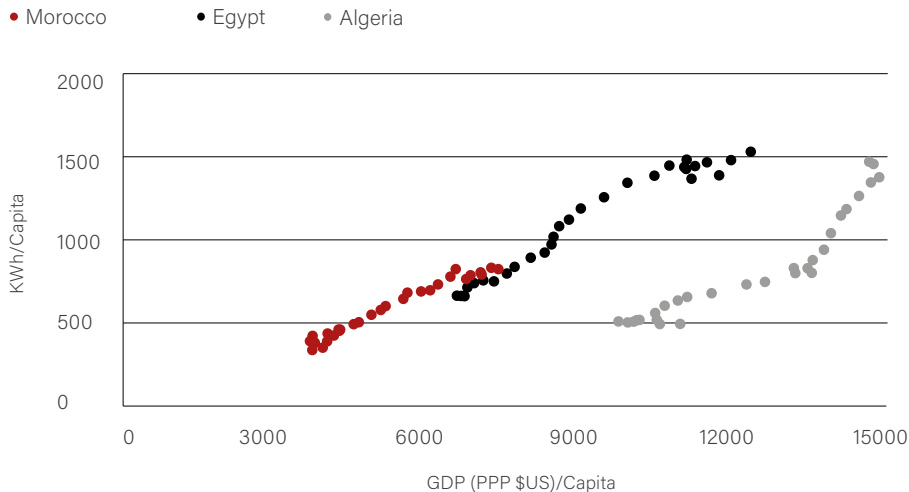

Chariot licences are located within an important industrial region along Morocco's Atlantic coast. The stretch from Kenitra to Casablanca, adjacent to Anchois, represents approximately two-thirds of Morocco's GDP and population; it is anticipated that industrial gas demand will grow significantly. The initial Anchois field gas volumes were regarded sufficient to meet expected domestic demands, however, with the confirmed discovery of increasing volumes,

Chariot has identified the opportunity to supply surplus gas into the European market, via the GME connection with Spain. This represents a very large and increasingly attractive market which could both take surplus gas over and above domestic demand from the initial Anchois development and also provide a rapid commercialisation route for any additional discoveries to be tied-back to the Anchois infrastructure.

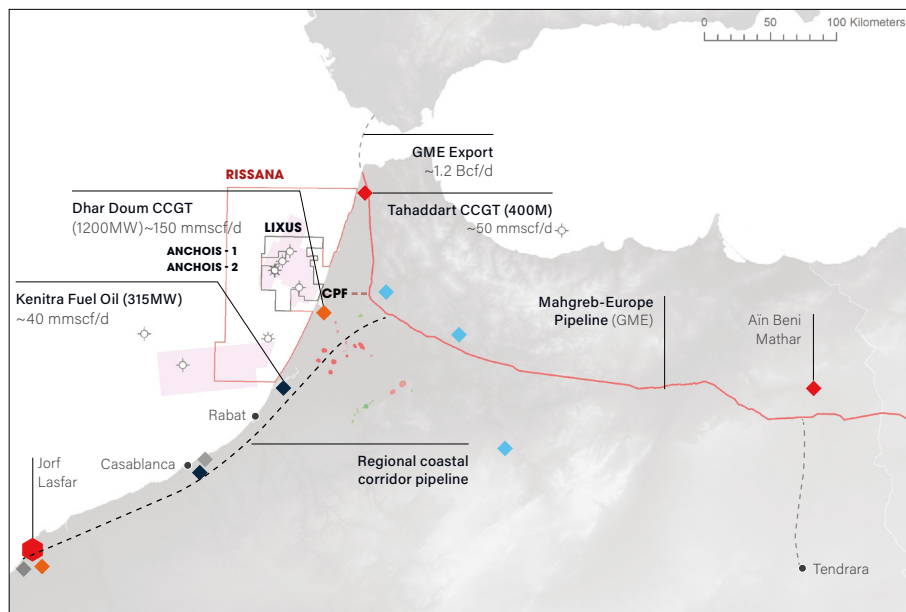

The industrial demand for gas is fast growing with prices already established in the region of US\$10-11/mcf. Lixus boasts excellent contract terms in what is widely known internationally to be a favourable fiscal environment. There is at present a 10-year corporate tax holiday from the commencement of production and a low 3.5% royalty on gas produced offshore at the water depth of the Anchois discovery, with ONHYM paying their 25% share of the development. The 10-year tax holiday is an important incentive to encourage the initiation of a domestic offshore gas supply.

The importance of Lixus to the Chariot Group as a strategic asset has increased considerably since the discovery at Anchois-2, but moreover to the Kingdom of Morocco, given the strong ESG credentials and ability to alleviate the growing energy demand, which is anticipated to double by 2040.

GAS MARKET

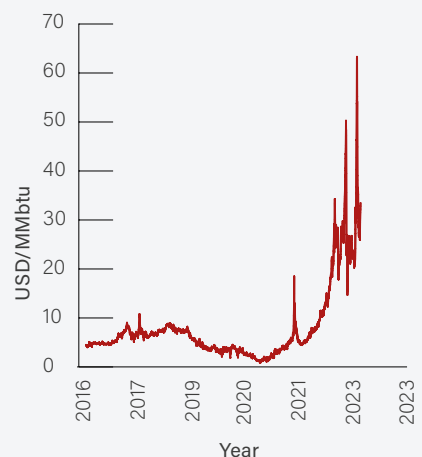

Domestic markets in Morocco offer attractive gas prices to both the industrial and power markets; the current pre-drill economic model is supported by audited 2C 361Bcf estimate base case resource, with 70mmscf per day potential at US\$8-15 per mcf to power and industry.

In October 2021, Chariot signed a gas sales agreement with a leading international energy group for gas offtake. The MoU will underpin the development as part of a long-term partnership, which offers an important opportunity to sell surplus gas above domestic requirements into the European market, utilising the connection of the Maghreb-Europe (GME), which provides direct access to Europe via Spain.

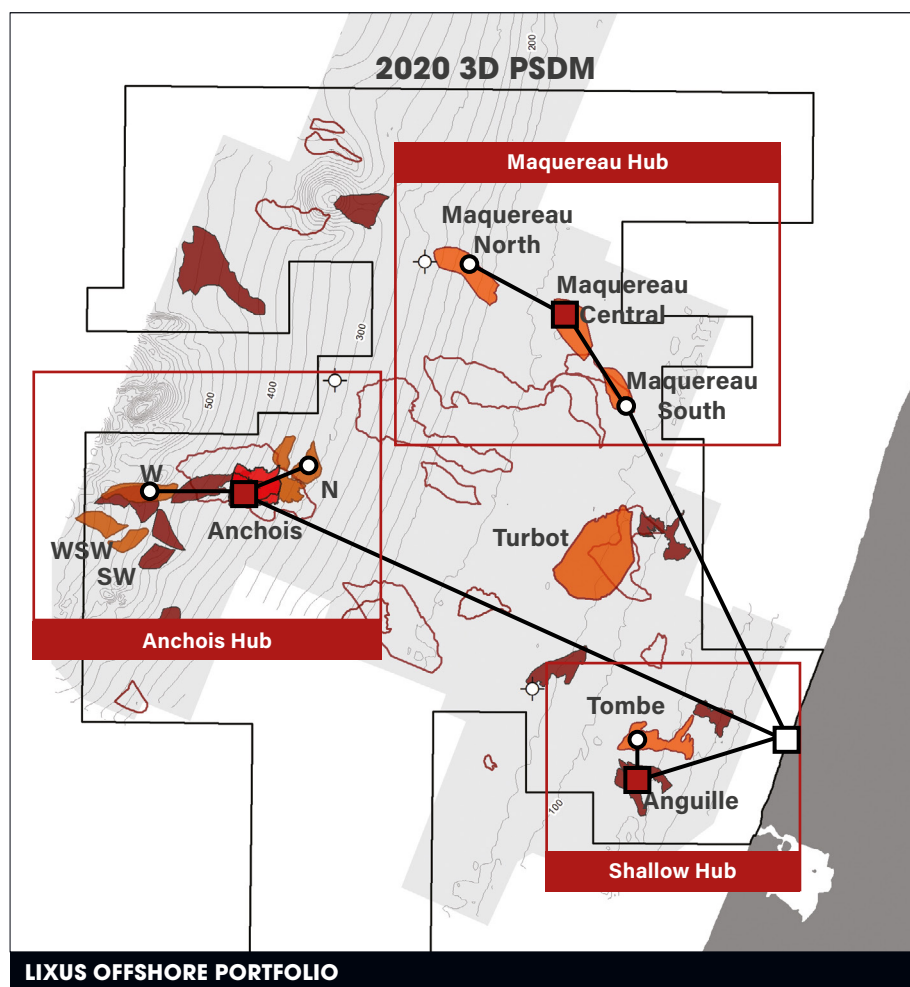

With gas prices in Spain typically ranging from 20 to 60 US\$/mmBtu during Q4 2021 to Q1 2022, and with the widely held expectation that European gas prices will remain high for the medium term, selling surplus gas into the European market provides an extraordinary opportunity for Chariot to play a role in the diversification of Europe's gas supplies and for this market to provide a catalyst to deliver accelerated growth from the upsides in the exploration portfolio.

The Anchois Development project is targeting first gas from as early as 2024.

EXPLORATION PORTFOLIO:

In Morocco, Chariot has built an extensive library of seismic data, including >4,000 km² of 3D and nearly 20,000 km of 2D regional seismic data. Access to this vast dataset has been crucial in understanding the on-block play types and maturing a material prospect portfolio. With the intention to acquire more data over areas that have already revealed significant prospectivity and play extensions, the team are currently focused on maturing exploration opportunities over the Lixus and Rissana blocks.

Lixus

Following the positive drilling results of 2022, additional exploration prospects within the Lixus licence area with similar seismic attributes to the Anchois discovery are now considered to be low risk. Accordingly, extensive work is ongoing to extrapolate the lessons learnt from drilling results and the application of seismic attribute analysis to de-risk and rank the follow-on portfolio. This work includes conventional seismic interpretation, revision of the depth model of the 3D dataset reprocessed in 2020, and advanced analysis such as AVO, seismic inversion and spectral decomposition.

The focus areas de-risked by the Anchois-2 well are the so-called “hubs”, groups of prospects that can be tied-back through a potential development initially unlocked by one anchor prospect, which itself would provide the flowlines to the onshore CPF:

- The Anchois Hub consists of the “Anchois Satellites”, which are extensions of the discovered sand intervals into adjacent fault blocks and are typically within 5-10km of the existing Anchois wells. The satellite prospects encompass stacked targets within the Miocene reservoirs (A, B, C, M and O sands). These targets have been discretely mapped and can be calibrated to the gas bearing intervals at Anchois, with upside contributions from younger, shallower Pliocene sands which also exhibited strong attribute support for gas-bearing reservoir.
- The Maquereau Hub is located on the NE boundary of the larger Mio-Pliocene basin in the central part of the block, approximately 20 km north-east of Anchois. Prospects are formed of clastic turbidite systems that were deposited in the same environment and basin as the Anchois sands, however redirected to the north, due to growing accommodation space from listric faulting. The primary target within this hub is Maquereau Central.
- The Shallow Hub hosts key shallow water prospects Anguille and Tombe; these clastic channel prospects are in a basin east of Anchois, within 10km of the coast, in water depths of <100m. The reservoir targets can be correlated across the basin to good quality sands intersected in the 2011 Deep Thon-1 well. The primary target within this hub is Anguille.

Rissana

The Rissana Offshore licence was awarded to Chariot with 75% interest and operatorship in February 2022; the block has a total area of 8,489km². Surrounding the Lixus Offshore licence, Rissana holds significant volumes of on block 3D data, including recaptured areas of the recently reprocessed 2020 and 2017 3D cubes from the Lixus licence and Chariot's historical licence areas respectively.

Rissana hosts a substantial portfolio of exploration prospects in a variety of different plays, including an extension of the Anchois gas play that was confirmed by the Anchois-2 gas discovery in 2022. Other plays include Miocene – Pliocene clastic sand systems further north, where prospects have reservoirs of similar age to prospects on the Lixus block across a wide range of trapping styles, with characteristic supporting seismic attributes.

One of the key prospects on Rissana is Emissole, located in the north-eastern corner of the 3D dataset. This tilted fault block structure holds five stacked reservoir intervals set in an unconformity sub-crop setting. Emissole has several visible flat spots and AvO anomalies, supporting significant volumes in shallow water depths of approximately 150m and with several follow-up opportunities.

Legacy 3D prospects from the previous Mohammedia licence have also been reintegrated into the Chariot portfolio. The shallow marine, clastic deltaic prospects add giant-scale volumetric potential to the exploration portfolio.

Brazil

The Barreirinhas basin licence blocks are currently in a period of suspension and future extensions are possible due in part to the impacts of the COVID-19 pandemic.

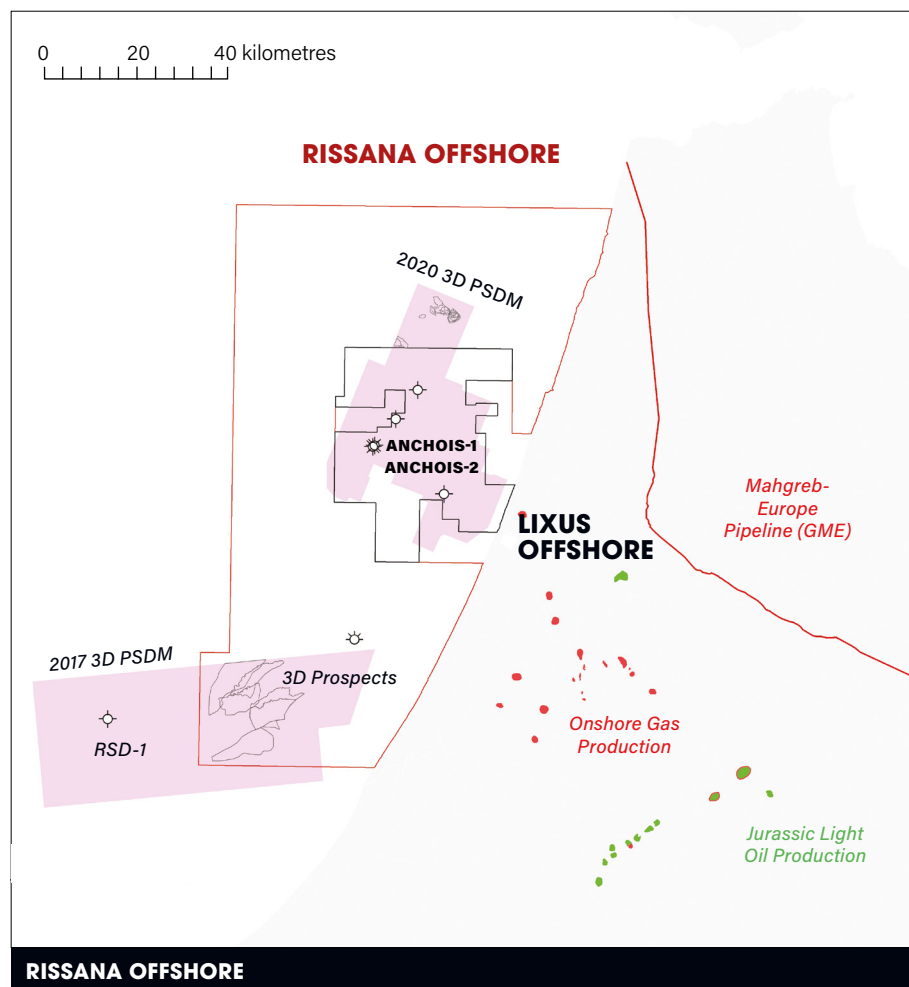

Namibia

Chariot has made the decision not to renew operatorship of the 2312 A & B "Central Blocks" that comprise the PEL 71 licence. Chariot retains the option to back-in to the 2714 A & B "Southern Blocks" licence.

RENEWABLE AND HYBRID POWER DEVELOPER

“This partnership is looking to provide clean, sustainable, and more competitive energy to operational mines in Africa. This is a market of significant scale, that is largely untapped, where Chariot’s management has a deep understanding and high-level commercial networks.”

Adonis Pouroulis

Acting Chief Executive Officer of Chariot

STRATEGIC PARTNERSHIP WITH TOTAL EREN

Further to the acquisition of AEMP last year, Chariot’s Transitional Power team has continued to go from strength to strength, building up the team, and developing its plans and objectives as well as further strengthening its strategic partnership with Total Eren, a leading France based renewable energy Independent Power Producer to work together on the joint origination and development of wind and solar projects for mining clients in Africa. This partnership is in place for the next three years, with the option to extend for a further two thereafter and Chariot has the right to invest between 15-49% into the co-developed projects.

To date, the partners have built an active pipeline of 485MW of African mining power projects and are targeting 1GW by the end of the year. Chariot and Total Eren also have ambitions to collaborate on other projects and transactions in Africa.

Fabienne Demol, Executive Vice-President & Global Head of Business Development at Total Eren: “Total Eren is very pleased to implement a strategic partnership with Chariot. We continue to believe that our expertise as a global renewable IPP and our strategic partnership with TotalEnergies, combined with Chariot’s experienced team and wide reach to the African mining industry will bring further value accretive opportunities to our collaboration. Together, we are determined to address the energy needs of African mining companies, and we will collaborate on other renewable energy projects in Africa.”

ESSAKANE

Burkina Faso

Chariot’s first renewable project supplies 15MW of solar power as part of a hybrid solar-thermal power solution to IAMGOLD’s Essakane gold mine in Burkina Faso. On commissioning, the project was the largest hybrid PV-HFO power plant in the world and one of the largest solar facilities in sub-Saharan Africa with 130,000 solar panels.

Chariot holds 10% equity in this award-winning project, with Total Eren holding the remaining 90%. Chariot has been involved in the project since the origination of the mine, including: designing the size and determining the operating philosophy of the hybrid power plant; obtaining local authorisations and permits; selection of the engineering, procurement and construction contractor; financing; and operating post-completion. The project’s successful completion and generation of returns provide proof of concept and a valuable showcase from which replication and scale-up is anticipated.

100% of permanent Essakane project staff are nationals, demonstrating the benefit to local communities, while 1% of project revenues are dedicated to community investment, such as tree planting campaigns and the distribution of solar kits to schools. Carbon credits are also registered with the UN to raise funds for community developments.

THARISA

South Africa

In February 2022, Chariot and Total Eren jointly announced the signing of a Memorandum of Understanding ("MoU") with Tharisa plc, the platinum group metals and chrome producer, to develop, finance, construct, own, operate and maintain a solar photovoltaic (PV) project for the supply of electricity to the Tharisa mine, in the North West Province, South Africa.

The solar PV project is initially anticipated to be 40MW with demand expected to increase over the life of the Tharisa Mine. This MoU is the first step towards the implementation of the Project and signing of a long-term Power Purchase Agreement ("PPA") for the supply of electricity on a take-or-pay basis and project development is already well underway. Benoit Garrivier, Chariot Transitional Power CEO: "This MoU with Tharisa demonstrates the financial and sustainable benefits that our offering can bring to mining companies operating in Africa. The Tharisa team are very forward looking and understand that the addition of a solar PV project at their mine in South Africa will bring significant benefits to the business. Together with Total Eren, we are excited to be working on the financing and development of the project." Adonis Pouroulis, Acting CEO of Chariot, beneficially owns a substantial proportion of the total voting rights in Tharisa.

FIRST QUANTUM

Zambia

As also announced post period in March 2022, Chariot and Total Eren have established a partnership with First Quantum Minerals ("FQM"), a global mining and metals company, to advance the development of a 430 MW solar and wind power project for its mining operations in Zambia.

This flagship project has the potential to complement and expand Zambia's existing renewable energy capacity and would provide FQM with competitive and sustainable power for its Zambian mining operations, delivering on FQM's commitment to decarbonisation as it seeks to reduce its carbon footprint and improve energy security through diversification of supply.

FQM's Kansanshi Mine General Manager Anthony Mukutuma commented: "The project will offer significant benefits to Zambia, by unlocking some of its world-class renewable potential. It will help the country realise some of its untapped solar and wind resources by attracting large-scale foreign investment and adding significant renewable energy capacity. In line with Zambia's Vision 2030, the project will further contribute to improving Zambia's energy-mix, reducing expensive regional power imports and exposure to fuel prices."

GREEN HYDROGEN PROJECT

PROJECT NOUR

Chariot's green hydrogen project, "Project Nour", spans two onshore areas totalling approx. 5,000 km², across northern Mauritania; a location that takes advantage of the wide scale wind and solar potential, important for large-scale renewable energy generation and low-cost hydrogen production.

Project Nour also benefits from geographical proximity to Nouadhibou (Mauritania's deep-sea port) and to large European markets, with the potential to make Mauritania one of the world's main producers and exporters of green hydrogen.

Chariot is working in partnership with the Government of Mauritania to support their ambition to become a leading producer and exporter of green hydrogen, the latter strengthened through the MoU signed with the Port of Rotterdam in April 2022, which was a first step in establishing supply chains to enable the sale of green hydrogen and its derivative products (notably ammonia) into Europe.

Project Nour has the ability to create a range of positive impacts through socio-economic development in Mauritania through increased investment, job creation, skill development and increased government revenues, and its world class potential was verified by the Pre-Feasibility Study ("PFS"), as announced in May 2022. A Framework Agreement is now in place which defines the terms and guiding principles to pave the way for the in-depth feasibility study that will be undertaken over the next 24 months and a partnering process is underway with the objective of forming a world class consortium to further develop the project.

GREEN HYDROGEN MARKET

Green hydrogen is predicted to play a vital role in the global energy transition; the results of the PFS show the potential scale of Project Nour, with up to 10GW of installed electrolysis to produce green hydrogen and green ammonia, Project Nour could become one of the largest global projects of its kind by 2030.

The International Renewable Energy Agency projects that the combined value of hydrogen and its derivatives will be larger than the fossil fuel market by 2050.

** Diagram adapted from IRENA (2020) Green hydrogen: A guide to policy making

HYDROGEN IS A KEY COMPONENT OF THE ENERGY TRANSITION WITH HUGE MARKET GROWTH POTENTIAL

"We are very pleased that the PFS has confirmed the world class potential of Project Nour, both in its unique capacity to generate green hydrogen and for the broader development opportunities that it could bring to Mauritania. It is exciting to be looking to harness our natural resources in this way and Chariot has our full support as they progress this through the detailed feasibility studies."

PRE-FEASIBILITY STUDY

The PFS for Project Nour, completed in 2022, confirmed the project's ability to produce some of the cheapest green hydrogen in the world:

- Unique and complementary wind and solar conditions, underpinning attractive project economics
- Possibility of production of competitive green ammonia for export
- Partnering process underway with the objective to form a world-class consortium

Chariot recently signed a Framework Agreement with the Government of Mauritania, paving the way for the in-depth feasibility study that will seek to confirm the potential for installing up to 10GW of electrolyser capacity.

SIGNIFICANT DOMESTIC VALUE FOR THE COUNTRY OF MAURITANIA:

Providing baseload power to the national grid

Diversifying industrial activities (e.g., green steel)

Developing local infrastructure with the potential to have a significant impact on GDP

Potential to create a range of jobs

Increase access to clean water for both residential and industrial use

OUR COMMITMENT TO SUSTAINABLE OPERATIONS

Robust management of environmental, social and governance (ESG) concerns are at the core of what we do and how we work. Chariot seeks to embed a responsible approach to ESG management throughout the business. This statement provides an outline of the policies in place that guide the Group and its employees when dealing with such concerns in the workplace.

SUSTAINABILITY

Chariot adopts industry best practice through using the Equator Principles, IFC Performance Standards and the United Nations Sustainable Development Goals ("UN SDGs") as benchmarks and guiding principles.

Two of the UN SDGs are particularly relevant to our business and underpin our strategy and our values:

Goal 7:

Ensure access to affordable, reliable, sustainable modern energy for all – specifically around energy efficiency and advanced and cleaner fossil-fuel technology... expansion of infrastructure and upgrade technology for supplying modern and sustainable energy services for developing countries...in accordance with their respective programmes of support.

Goal 9:

To build resilient infrastructure, promote inclusive and sustainable industrialisation and foster innovation – ...raise industry's share of employment and gross domestic product, in line with national circumstances... upgrade infrastructure and retrofit industries to make them sustainable with increased resource-use efficiency and greater adoption of clean and environmentally sound technologies and industry.

We acknowledge the potential ESG impacts that our activities may have as we develop our projects. Our team is committed to proactively identifying and assessing issues that are important to our business and to our stakeholders. We manage these and their associated risks and seek to minimise the impacts of our activities as far as possible by putting robust frameworks and policies in place.

In addition, we are building our ESG capacity throughout the organisation, from site level environmental and social specialists to experienced ESG managers, and regularly engage expert consultants to provide further advice and support.

As per Goals 7 and 9 our projects provide a range of domestic benefits including:

- Providing baseload power to local and national grids, diversifying industrial activities with the potential to have a significant impact on GDP
- Developing local infrastructure and promoting job creation within our countries of operations
- Procuring locally to support small businesses and promote local skills development

ESG POLICY

Chariot is committed to maintaining and regularly reviewing its ESG policies.

- Conduct materiality assessments to identify priority areas – for our business and our stakeholders
- Work with specialist advisors to design and implement a comprehensive Group ESG strategy
- Build in-house ESG capacity – from Board to site level

KEY THEMES	FOCUS AREAS	ALIGNMENT TO THE UN SDGS
Environmental and Socio-economic Policy	<p>Environmental stewardship is a fundamental pillar of Chariot's activities and is an integral part of all our activities.</p> <p>Chariot adopts an environmental policy which sets standards that meet or exceed industry guidelines and host government regulations. This is reviewed on a regular basis. Wherever we operate, we will develop, implement and maintain management systems for sustainable development that will strive for continual improvement.</p> <p>An Environmental Management Plan will be developed and implemented for all seismic and drilling campaigns. At the point of discovery, a comprehensive Environmental Management System will be developed to co-ordinate and monitor mitigation measures throughout the fields' lifetime, from development to abandonment.</p> <p>The social impacts of every project will also be assessed with care and every effort made to ensure lasting benefits are provided to host communities in each jurisdiction in which we operate. It is Chariot's aim to ensure that all the likely environmental and socio-economic impacts will be managed with skill, care, and diligence in accordance with professional standards.</p>	<p>7 AFFORDABLE AND CLEAN ENERGY </p> <p>9 INDUSTRY, INNOVATION AND INFRASTRUCTURE </p> <p>12 RESPONSIBLE CONSUMPTION AND PRODUCTION </p> <p>13 CLIMATE ACTION </p>
Equal Opportunity and Diversity	<p>Chariot promotes and supports the rights and opportunities of all people to seek, obtain and hold employment without discrimination. It is our policy to make every effort to provide a working environment free from bullying, harassment, intimidation, and discrimination on the basis of disability, nationality, race, sex, sexual orientation, religion or belief.</p>	<p>5 GENDER EQUALITY </p> <p>10 REDUCED INEQUALITIES </p>
Employee Welfare	<p>Chariot aims to assist employees at all levels to improve their professional abilities and to develop their skills.</p> <p>The Group will practise workforce and succession planning regarding the number and type of personnel resources that will be required in the future. Individual career progression activities are developed with this in mind.</p>	<p>4 QUALITY EDUCATION </p> <p>8 DECENT WORK AND ECONOMIC GROWTH </p> <p>10 REDUCED INEQUALITIES </p>
Code of conduct	<p>Chariot maintains and requires the highest ethical standards in carrying out its business activities in regard to dealing with gifts, hospitality, corruption, fraud, the use of inside information and whistleblowing. Chariot has a zero-tolerance policy towards bribery.</p>	<p>16 PEACE, JUSTICE AND STRONG INSTITUTIONS </p>
Joint Venture Partners, Contractors and Suppliers	<p>Chariot is committed to being honest and fair in all its dealings with partners, contractors and suppliers. The Group has a policy to provide clarity and protection, within its terms of business, to ensure the delivery and receipt of products and services at agreed standards. Procedures are in place to ensure that any form of bribery or improper behaviour is prevented from being conducted on Chariot's behalf by joint venture partners, contractors, and suppliers. Chariot also closely guards information entrusted to it by joint venture partners, contractors, and suppliers, and seeks to ensure that it is never used improperly.</p>	<p>8 DECENT WORK AND ECONOMIC GROWTH </p> <p>12 RESPONSIBLE CONSUMPTION AND PRODUCTION </p> <p>17 PARTNERSHIPS FOR THE GOALS </p>
Operating Responsibly and Continuous Improvement	<p>Chariot is committed to a proactive quality policy to ensure that stakeholders are satisfied with its results and the way in which the business operates and to promote continuous improvement in the overall operation of the Group. In pursuit of these objectives, Chariot will use recognised standards and models as benchmarks for its management systems.</p>	<p>12 RESPONSIBLE CONSUMPTION AND PRODUCTION </p> <p>13 CLIMATE ACTION </p>

ASSESSING AND MANAGING RISKS

The Group is subject to various risks including those which derive from the nature of its transitional gas, power and green hydrogen activities. The following list sets out the Group's principal risks and uncertainties and also provides details as to how these are managed.

RISK	DESCRIPTION	MITIGATION
Funding and Financing Risk	The nature of the Group's business of exploration appraisal and development in deep offshore regions means that there are significant costs associated with seismic and drilling and development projects.	The Group manages this risk in a number of ways. The Group closely monitors its cash position and each month produces updated cash flow forecasts to help it determine whether it has sufficient financial resources to fund its short and medium-term operations. The Group also ensures that it always has adequate levels of cash on deposit with varying terms of maturity to match when significant items of expenditure become due. In addition, the Group is continually seeking to reduce its exposure to large expensive projects by engaging with farm-in partners with a view to reducing its equity stakes in the licences in which it operates and where the Group is unable to attract partners it may relinquish assets. To date, the Group has been successful in both managing its cash position and bringing large, well-funded partners into its licences.
Exploration Risk	There is no assurance that the Group's exploration activities will be successful.	Recognising this, the Group continually seeks to manage this risk by managing its funding and financing risk as described above and, in particular, by bringing in farm-in partners who have demonstrable technical skills and experience in similar projects worldwide. Furthermore, the Group seeks to employ individuals with strong technical skills and experience in the areas in which it operates. This is evidenced by the fact that a number of the Group's Board and Senior Technical Team have previously worked both offshore and onshore in Namibia, throughout West and North Africa and in Brazil.
Operating Risk	The nature of oil and gas operations means that the Group is exposed to risks such as equipment failure, well blowouts, fire, pollution and bad weather.	In order to mitigate these risks, the Group ensures that: it adopts best in class industry operating and safety standards; it has sufficient levels of relevant insurance cover; and it only works with fellow operators and world-class contractors who can demonstrate similar high standards of safety, operating and financial capability. We believe the impact of sanctions on Russia to be remote on our supply chain requirements.
COVID-19	The ongoing nature and uncertainty of the pandemic in many countries including the measures and restrictions put in place (travel bans and quarantining in particular) continue to have the ability to impact the Group's business continuity, workforce, supply-chain, business development and, consequently, future revenues.	The Group makes every effort to minimise the impact on its operations from travel restrictions by active planning for logistics as evidenced on the recent drilling campaign in Morocco. Efforts are made to engage with governmental authorities where needed to assist with operational requirements.
Environmental Risk	The Group is extremely conscious of the environmental risks that are inherent in the oil and gas industry and, in particular, those that exist as a result of operating offshore.	Given this, the Group works closely with the relevant ministries to ensure that all relevant Environmental Impact Studies are undertaken in advance of any proposed seismic or other offshore operations that are undertaken and that best in class industry environmental standards and practices are adopted by the Group in all of its operations. The Group engages with third party contractors for readiness planning and potential execution concerning i) any potential pollution incident and ii) emergency response planning related to drilling campaigns. Furthermore, during seismic acquisition programmes, the Group routinely deploys marine mammal observers on vessels who are empowered to stop or modify the seismic programme if they deem it necessary. Whilst the Group can never fully mitigate against the cost and implications of future changes in environmental legislation and regulation, its strong working relationship with the governments in the countries in which it operates places it in a good position to be able to work through any potential significant changes that could arise in the future.
Transitional Power and Green Hydrogen Project Risks	The countries the pipeline of projects are located in and future potential project locations are likely to carry geographic, economic, political and legal risks.	The Group, in partnership with Total Eren, acquires political risk insurance as part of the mitigating strategy for development projects. Sub-contractors are subject to competitive tender processes and awards are made to established third parties with appropriate expertise and credentials.

BOARD OF DIRECTORS

EXPERIENCED OPERATIONAL TEAM

**ADONIS POUROULIS**

Acting Chief Executive Officer

Experience

- One of the founders of Chariot, has worked in the sector for over 30 years
- Influential in the founding, financing and growth of a number of companies, including Petra Diamonds
- Founder and chair of the Pella Resources Group, an African focused natural resources and energy group
- Member of the Board since IPO, CEO since July 2020

**JULIAN MAURICE-WILLIAMS**

Chief Financial Officer

Experience

- Chartered Accountant with over 15 years of experience in the energy sector
- Significant experience in financing, transactions and listed markets
- Previously with BDO LLP's natural resources department
- Joined the Board in July 2020

**DUNCAN WALLACE**

Technical Director

Experience

- Geologist with over 20 years of experience in exploration, appraisal and successful field development projects in exploration and production
- Managed Chariot's E&P activity since 2013, including the identification of the Lixus Offshore area in Morocco
- Joined the Board in July 2020

**GEORGE CANJAR**

Non-Executive Chairman

Experience

- Over 40 years with Shell, Carrizo, Davis Petroleum and Hess supervising exploration, development and engineering projects. Global experience from offshore SE Asia to North American onshore.
- Broad functional experience across the E&P sector with specific expertise in deal structuring, risk analysis, strategic modelling and finance
- Currently focused on transitional energy solutions including natural gas renewables

**ANDREW HOCKEY**

Non-Executive Director

Experience

- Over 35 years' experience in the oil & gas industry, with specific expertise in the development and production of gas assets in the UKCS sector
- Founder of Fairfield Energy Ltd and previous experience with Eni, Fina, LASMO, Triton Energy and Monument
- Currently CEO of IOG, a UK based Development and Production Operator with assets in the Southern North Sea gas basin

**CHRIS ZEAL**

Non-Executive Director

Experience

- Over 30 years' experience across a wide range of sectors and retained by over 20 FTSE100 companies including British Gas, Cairn Energy and Tullow Oil
- Previously Managing Director at Jefferies Hoare Govett (a division of Jefferies Inc.) specialising in corporate broking and investment banking
- Director at Ventus 2 VCT plc, a company invested in renewable energy projects in the UK

DIRECTORS' REMUNERATION REPORT

REMUNERATION COMMITTEE

The Group's Remuneration Committee comprises Chris Zeal (Chairman) and George Canjar.

The main purpose of the Remuneration Committee is to:

- make recommendations to the Board on an overall remuneration policy for Executive Directors and other senior executives in order to retain, attract and motivate high quality executives capable of achieving the Group's objectives; and
- demonstrate to shareholders that the remuneration of the Executive Directors of the Group is set by a committee whose members have no personal interest in the outcome of their decision and who will have due regard to the interests of the shareholders.

PROCEDURES FOR DEVELOPING POLICY AND FIXING REMUNERATION

The Board fixes executive remuneration and ensures that no Director is involved in deciding his or her own remuneration. The Committee is authorised to obtain outside professional advice and expertise.

The Remuneration Committee is authorised by the Board to investigate any matter within its terms of reference and it is authorised to seek any information that it requires from any employee.

DETAILS OF THE REMUNERATION POLICY

The fees to be paid to the Directors are recommended by the Remuneration Committee and are subject to approval by the full Board.

DIRECTORS' SERVICE AGREEMENTS

Service agreements for Directors are terminable by either party on notice periods of 3 months.

DIRECTORS' REMUNERATION

The following remuneration comprises Directors' fees and benefits in kind that were paid to Directors during the year:

	Fees/ basic salary US\$000	Performance cash bonus US\$000	Benefits in kind US\$000	Pension contribution US\$000	Year ended 31 December 2021 Total US\$000	Year ended 31 December 2020 Total US\$000

¹ 73,359,099 shares are held by Westward Investments Limited, a company which is owned by a discretionary trust of which A Pouroulis is one of a number of beneficiaries. 11,784,003 shares are held by Leto Trust of which A Pouroulis is one of a number of beneficiaries and 100,000 shares are owned directly by A Pouroulis.

² R Sinclair retired as director on 20 January 2022.

SHARE OPTIONS

The Group operates a Share Option Scheme pursuant to which Directors and senior executives may be granted options to acquire Ordinary shares in the Company at a fixed option exercise price. All remaining options granted under the plan lapsed during 2020.

NON-EXECUTIVE DIRECTORS' RESTRICTED SHARE UNITS ("RSU")

The Group operates an RSU scheme pursuant to which Non-Executive Directors may be awarded shares for nil consideration. The awards vest in equal instalments over a three year period on the anniversary of the grant date unless otherwise specified.

Further details of the RSU scheme can be found in note 21.

The Directors who held office at the reporting date and who had interests in the RSU scheme are:

By order of the Board

Chris Zeal

Chairman of the Remuneration Committee

21 June 2022

AUDIT COMMITTEE REPORT

This Committee currently comprises Chris Zeal (Chairman) and Andrew Hockey.

The Audit Committee met two times during the year. The Auditors have unrestricted access to the Chairman of the Audit Committee. Audit Committee meetings are usually attended by the Auditor and, by invitation, senior management.

The main responsibilities of the Audit Committee include:

- monitoring the integrity of the Group's financial statements, including review of the financial statements of the Company including its annual and half-yearly reports and any formal announcements relating to its financial performance;
- reviewing the effectiveness of the Group's financial reporting, internal control policies and procedures for the identification, assessment and reporting of risk;
- monitoring the effectiveness of the internal control environment;
- making recommendations to the Board on the appointment of the Auditors;
- making a recommendation to the Board on Auditors' fees;
- agreeing the scope of the Auditors' annual audit programme and reviewing the output;
- ensuring the independence of the Auditors is maintained;
- assessing the effectiveness of the audit process; and
- developing and implementing policy on the engagement of the Auditors to supply non-audit services.

The Audit Committee has considered the Group's internal control and risk management policies and systems, their effectiveness and the requirements for an internal audit function in the context of the Group's overall risk management system. The Committee is satisfied that the Group does not currently require an internal audit function; however, it will continue to periodically review the situation.

An essential part of the integrity of the financial statements lies around the key assumptions and estimates or judgements to be made. The Committee reviewed and was satisfied that the judgements exercised by management contained within the Report and Financial Statements are reasonable.

Details of fees payable to the Auditors are set out in Note 4.

Chris Zeal

Chairman of the Audit Committee

21 June 2022

CORPORATE GOVERNANCE STATEMENT

The Chairman and Directors support and take responsibility for high standards of corporate governance. AIM rules require AIM companies to comply or explain against a recognised corporate governance code. The Group has decided to adhere to the Quoted Companies Alliance's (QCA) Corporate Governance Code. The QCA Code is constructed around ten broad principles, details of which, along with the approach taken in respect of each principle at the Group, are below. The Board is not aware of any departure from the principles of the QCA Code.

PRINCIPLE	APPLICATION
1. Establish a strategy and business model which promote long-term value for shareholders.	For information on Chariot's business model, strategy and key challenges please refer to the CEO report on pages 10-13.
2. Seek to understand and meet shareholder needs and expectations.	Further detail is outlined in the Relations with shareholders section page 35 and full disclosure and information is available on the Company's website.
3. Take into account wider stakeholder and social responsibilities and their implications for long-term success.	See pages 7 and 26.
4. Embed effective risk management, considering both opportunities and threats, throughout the organisation.	The Directors acknowledge their responsibility for the Company's system of internal control and for reviewing its effectiveness. Despite the inherent presence of certain limitations in any system of internal control, the Board considers that the Company's existing risk assessment systems operated effectively throughout the year. Further information on relevant specific risks are detailed in the Risk Management statement and Committee overviews on pages 28 to 33.
5. Maintain the Board as a well-functioning, balanced team led by the chair.	The Board meets frequently to consider all aspects of the Group's activities. Full details of the Directors including background, relevant experience and current role, including appointments to Board Committees are detailed on page 29.
6. Ensure that between them the Directors have the necessary up-to-date experience, skills and capabilities.	Full details of the Directors including background, relevant experience and current role, including appointments to Board Committees are detailed on page 29.
7. Evaluate Board performance based on clear and relevant objectives, seeking continuous improvement.	The Board continually assesses the capabilities of the team and where the need has been identified seeks to make appointments which will enhance knowledge and skillset in delivering on the strategy. Full details of the Board Committees are contained in pages 30 to 33.
8. Promote a corporate culture that is based on ethical values and behaviours.	Chariot supports the growing awareness of social, environmental and ethical matters when considering business practices. Further information is detailed in pages 26 and 27.
9. Maintain governance structures and processes that are fit for purpose and support good decision-making by the Board.	A summary of the governance structures and processes is detailed in the Corporate Governance page on the Chariot website.
10. Communicate how the Company is governed and is performing by maintaining a dialogue with shareholders and other relevant stakeholders.	The outcome of all shareholders' votes will be disclosed on the Chariot website in a clear and transparent manner. Copies of all historic annual reports and other governance-related material including notices of all general meetings are disclosed on the Chariot website. Further details of the Board Committees are disclosed below. An annual Remuneration report is disclosed on pages 30 to 32.

WORKINGS OF THE BOARD AND ITS COMMITTEES

The Board of Directors

The Board meets frequently to consider all aspects of the Group's activities. A formal schedule of matters reserved for the Board has been issued and approved and includes overall strategy and approval of major capital expenditure.

The Board consists of the Chairman, Executive Directors and Non-Executive Directors. All Directors have access to the advice and services of the Company Secretary and the Group's professional advisors.

The Chairman

The Chairman's role is to lead the Board, set its agenda, ensure it receives accurate, timely and clear information and oversee the adoption, delivery and communication of the Company's Corporate Governance recommendations. Furthermore the Chairman ensures effective communication within the Board, its Committees and senior management and takes a leading role in determining the composition and structure of the Board.

Corporate Governance Committee

The Corporate Governance Committee comprises Andrew Hockey (Chairman) and Chris Zeal.

The purpose and objective of the Corporate Governance Committee is to provide a structured mechanism to consider Corporate Governance at Chariot. It provides guidance on all material corporate governance issues affecting the Group and makes recommendations to the Board on these issues. It also aims to monitor all developments and emerging best practice in Corporate Governance and to ensure adoption by Chariot at the appropriate juncture. Furthermore, the Corporate Governance Committee provides an overview on the effectiveness of the Board as a whole, each Board committee and the individual Directors in their roles as Board/Board Committee members.

Remuneration Committee

The Remuneration Committee comprises Chris Zeal (Chairman) and George Canjar.

The purpose of the Remuneration Committee is to make recommendations to the Board on an overall remuneration policy for Executive Directors and other senior executives in order to retain, attract and motivate high quality executives capable of achieving the Group's objectives. Furthermore, it serves the purpose of demonstrating to shareholders that the remuneration of the Executive Directors for the Group is set by a committee whose members have no personal interest in the outcome of their decision and who will have due regard to the interests of the shareholders.

Audit Committee

The Audit Committee comprises Chris Zeal (Chairman) and Andrew Hockey.

The Audit Committee is responsible for monitoring the quality of any internal financial controls and for ensuring that the financial performance of the Group is properly monitored, controlled and reported on. It also meets the Group's auditors and reviews reports from the auditors relating to accounts and any internal financial control systems.

Nomination Committee

The Nomination Committee comprises George Canjar (Chairman) with another member to be appointed imminently.

The Nomination Committee meets at least annually and is responsible for reviewing the structure, size and composition of the Board, succession planning, preparing a description of the role and capabilities required for a particular appointment, identifying and nominating candidates to fill Board positions and evaluating the performance and effectiveness of the Board.

Relations with shareholders

Communication with shareholders is given a high priority by the Board of Directors which takes responsibility for ensuring that a satisfactory dialogue takes place. Directors plan to meet with the Company's institutional shareholders following the announcement of interim and final results and at other appropriate times. The Directors are also in regular contact with stockbrokers' analysts. The Company has developed a website containing investor information to improve communication with individual investors and other interested parties.

Internal control

The Directors acknowledge their responsibility for the Company's system of internal control and for reviewing its effectiveness. The system of internal control is designed to safeguard the Company's assets and interests and to help ensure accurate reporting and compliance with applicable laws and regulation. Despite the inherent presence of certain limitations in any system of internal control, the Board considers that the Company's existing systems operated effectively throughout the year.

REPORT OF THE DIRECTORS

The Directors present their report together with the audited financial statements for the year ended 31 December 2021.

RESULTS AND DIVIDENDS

The results for the year are set out on page 42.

The Directors do not recommend payment of a final dividend (31 December 2020: US\$Nil).

PRINCIPAL ACTIVITY

The principal activity of the Group is appraisal and development of gas assets, renewable energy to power mining projects, and development of an early stage green hydrogen project.

GOING CONCERN

The Directors consider that the Group has adequate financial resources to enable it to continue in operation for the foreseeable future. For this reason they continue to adopt the going concern basis in preparing the financial statements. Further details are set out in note 2 to the financial statements.

BUSINESS REVIEW AND PRINCIPAL RISKS AND UNCERTAINTIES

A full review of the Group's activities during the year, recent events and expected future developments is contained within the Chairman's Statement, the Chief Executive Officer's Review, the Chief Financial Officer's Review and the Technical Director's Review of Operations. These pages also form part of this Report of the Directors.

The Group is subject to various risks including those which derive from the nature of its exploration, appraisal and development activities. The Risk Management Statement sets out the Group's principal risks and uncertainties and also provides details as to how these are managed.

KEY PERFORMANCE INDICATORS

The Group has certain Key Performance Indicators ("KPIs") which seek to align its performance with the interests of its key stakeholders. These KPIs cover share price performance versus peers, management of cash resources and working capital, efficient growth of resource base, conversion of resources to reserves, capital expenditure versus budget, securing additional finance when required and maintaining high HSE standards. Further details of business performance are detailed in the Chairman's Statement and Chief Executive Officer's Review.

FINANCIAL INSTRUMENTS

Details of the use of financial instruments by the Group are contained in note 20 to the financial statements.

DIRECTORS

The Directors of the Company during the year were:

George Canjar (Non-Executive Chairman)	
Adonis Pouroulis (Acting Chief Executive Officer)	
Robert Sinclair (Non-Executive Director)	Retired 20 January 2022
Chris Zeal (Non-Executive Director)	
Andrew Hockey (Non-Executive Director)	
Julian Maurice-Williams (Chief Financial Officer)	
Duncan Wallace (Technical Director)	

Details of Directors' interests in shares, share options, LTIPs and RSUs are disclosed in the Directors' Remuneration Report.

DIRECTORS' RESPONSIBILITIES

The Directors are responsible for preparing the Report of the Directors and the financial statements for the Group in accordance with applicable Guernsey law and regulations.

Guernsey legislation requires the Directors to prepare financial statements for each financial year which give a true and fair view of the state of affairs of the Group and of the profit or loss of the Group for that year.

The Directors have elected to prepare the financial statements in accordance with UK adopted International Accounting Standards. International Accounting Standard 1 requires that the financial statements present fairly for each financial year the Group's financial position, financial performance and cash flows. This requires the faithful representation of the effects of transactions, other events and conditions in accordance with the definitions and recognition criteria for assets, liabilities, income and expenses set out in the International Accounting Standards Board's "Framework for the preparation and presentation of financial statements". In virtually all circumstances, a fair presentation will be achieved by compliance with all applicable IFRSs.

A fair presentation also requires the Directors to:

- Select suitable accounting policies and then apply them consistently;
- Make judgements that are reasonable and prudent;
- State whether applicable accounting standards have been followed subject to any material departures disclosed and explained in the financial statements; and
- Prepare the financial statements on a going concern basis unless it is inappropriate to presume that the Company will continue in business.

The Directors are responsible for keeping proper accounting records which disclose with reasonable accuracy at any time the financial position of the Group and to enable them to ensure that the financial statements comply with The Companies (Guernsey) Law, 2008. They are also responsible for safeguarding the assets of the Group and hence for taking reasonable steps for the prevention and detection of fraud and other irregularities.

The Directors are responsible for the maintenance and integrity of the corporate and financial information included on the Group's website. Legislation in Guernsey governing the preparation and dissemination of financial statements may differ from legislation in other jurisdictions.

AUDITORS

All of the current Directors have taken all the steps they ought to have taken to make themselves aware of any information needed by the Company's auditors for the purposes of their audit and to establish that the auditors are aware of that information. The Directors are not aware of any relevant audit information of which the auditors are unaware.

BDO LLP have expressed their willingness to continue in office and a resolution to re-appoint them as auditors will be proposed at the next General Meeting.

By order of the Board

Adonis Pouroulis

Acting Chief Executive Officer

21 June 2022

OPINION ON THE FINANCIAL STATEMENTS

In our opinion the financial statements:

- give a true and fair view of the state of the Group's affairs as at 31 December 2021 and of its loss for the year then ended;
- have been properly prepared in accordance with UK adopted international accounting standards; and
- have been prepared in accordance with the requirements of the Companies (Guernsey) Law, 2008.

We have audited the financial statements of Chariot Limited (the 'Parent Company') and its subsidiaries (the 'Group') for the year ended 31 December 2021 which comprise the Consolidated Statement of Comprehensive Income, the Consolidated Statement of Changes in Equity, the Consolidated Statement of Financial Position, the Consolidated Cash Flow Statement and notes forming part of the financial statements, including a summary of significant accounting policies.

The financial reporting framework that has been applied in the preparation of the financial statements is applicable law and UK adopted international accounting standards.

BASIS FOR OPINION

We conducted our audit in accordance with International Standards on Auditing (UK) (ISAs (UK)) and applicable law. Our responsibilities under those standards are further described in the Auditor's responsibilities for the audit of the financial statements section of our report. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Independence

We remain independent of the Group and the Parent Company in accordance with the ethical requirements that are relevant to our audit of the financial statements in the UK, including the FRC's Ethical Standard as applied to listed entities, and we have fulfilled our other ethical responsibilities in accordance with these requirements.

CONCLUSIONS RELATING TO GOING CONCERN

In auditing the financial statements, we have concluded that the Directors' use of the going concern basis of accounting in the preparation of the financial statements is appropriate.

Given of the judgements made by the Directors, and the significance of this area, we have determined going concern to be a key area of focus for the audit. Our evaluation of the Directors' assessment of the Group and the Parent Company's ability to continue to adopt the going concern basis of accounting and response to the key audit matter is included in the "Key Audit Matters" section below.

Based on the work we have performed, we have not identified any material uncertainties relating to events or conditions that, individually or collectively, may cast significant doubt on the Group's ability to continue as a going concern for a period of at least twelve months from when the financial statements are authorised for issue.

Our responsibilities and the responsibilities of the Directors with respect to going concern are described in the relevant sections of this report.

OVERVIEW

Coverage	96% (2020: 92%) of Group total assets 85% (2020: 97%) of Group total loss		
Key audit matters		2021	2020
	Business combination	Yes	No
	Going concern	Yes	Yes
	Carrying amount of exploration and evaluation assets	No	Yes
	The carrying amount of exploration and evaluation assets is no longer considered to be a key audit matter due to there being no impairment indicators in the current year.		
Materiality	Group financial statements as a whole \$800,000 (2020: \$370,000) based on 1.5% (2020: 2%) of total assets		

AN OVERVIEW OF THE SCOPE OF OUR AUDIT

Our Group audit was scoped by obtaining an understanding of the Group and its environment, including the Group's system of internal control, and assessing the risks of material misstatement in the financial statements. We also addressed the risk of management override of internal controls, including assessing whether there was evidence of bias by the Directors that may have represented a risk of material misstatement.

We determined that there were two significant components in the Group which were subject to a full scope audit. The remaining components of the Group were considered non-significant and these components were principally subject to analytical review procedures. The audits of each of the significant components were performed in the UK. All of the audit work was conducted by the Group engagement team.

KEY AUDIT MATTERS

Key audit matters are those matters that, in our professional judgement, were of most significance in our audit of the financial statements of the current period and include the most significant assessed risks of material misstatement (whether or not due to fraud) that we identified, including those which had the greatest effect on: the overall audit strategy, the allocation of resources in the audit, and directing the efforts of the engagement team. These matters were addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

KEY AUDIT MATTER	HOW THE SCOPE OF OUR AUDIT ADDRESSED THE KEY AUDIT MATTER
<p>Business Combination</p> <p>Refer to note 11 of the financial statements</p> <p>On 25 June 2021 the Group completed the acquisition of the business of Africa Energy Management Platform ("AEMP") including the related 10% holding in the Essakane project.</p> <p>The assessment of the purchase price allocation ("PPA") and the total consideration for the transaction included a number of key judgements and estimates exercised by management and resulted in complex accounting.</p> <p>Therefore this was considered to be an area of significant audit risk and a key audit matter.</p>	<p>In regards to the acquisition accounting for the business combination we performed the following audit procedures:</p> <ul style="list-style-type: none"> • We reviewed the purchase agreement and associated legal documents, made inquiries of Management and assessed the activities of AEMP to confirm the appropriateness of Management's accounting treatment for the transaction as a business combination in accordance with IFRS 3 Business Combinations. • We assessed the validity of the date at which control passed to the Group based on the contractual terms and the status of conditions precedent for completion. • We recalculated the fair value of consideration paid. This included agreeing inputs to supporting documents and challenging Management's assessment of the likelihood of the linked developments impacting contingent consideration being pursued, by evaluating the likelihood of future developments crystallising within the timeframe governed by the SPA • We evaluated Management's determination of the allocation of the consideration to the assets and liabilities acquired in order to assess whether the fair values were supportable by agreeing the Purchase Price Allocation (PPA) to supporting calculations prepared by Management. • We challenged Management's determination of the fair value of the assets, liabilities, and any contingent assets and liabilities acquired in order to assess whether the fair values are supportable. We recalculated the fair values based on the most recent financial information available to the Group provided by the acquirees major shareholder. • We performed audit procedures over the opening balance sheet as at the date of acquisition by agreeing amounts to the acquirees trial balance and where appropriate, supporting documentation. <p>Key observations:</p> <p>Based on the procedures performed we consider the business combination to be appropriate considering the level of judgement and estimate involved.</p>
<p>Going Concern</p> <p>Refer to note 2 of the financial statements</p> <p>Management and the directors are required to consider whether the Group can continue to operate as a going concern for a period of no less than twelve months from the anticipated date of approval of the financial statements.</p> <p>As at 31 December 2021 the Group had cash of US\$19.4 million and no debt. In Q2 2022 an equity fundraise completed which raised US\$29.5 million.</p> <p>There is a risk that, given the current plans to complete the field development plan in Morocco, as well as the investment into the transitional power business, the Group may be in a position where cash reserves are depleted to the extent that a material uncertainty over Going concern exists and the uncertainties over the going concern assumption may be inadequately disclosed in the Group's financial statements.</p>	<p>Our evaluation of the Directors' assessment of the Group's ability to continue to adopt the going concern basis of accounting included the following procedures:</p> <ul style="list-style-type: none"> • Assessing the reasonableness of Directors' forecast expenditure for a period of at least twelve months from the date of approval of the financial statements by reference to Directors' budgeted activity and actual expenditure in 2021. • Agreeing the current cash resources to supporting documentation, this included vouching the cash receipts of the latest share offering to either the Group's bank statements or other corroborating information where the cash had not been received. • We obtained the directors' base case cash flow forecast, and analysed the completeness of the amounts included based on our knowledge of the business, its future plans and its commitments under exploration licences. This included considering the reasonableness of the planned, but uncommitted expenditure in respect of the subsidiaries acquired in the year. • We analysed the directors' reverse stress testing to assess the impact of planned expenditure increasing and considered mitigating actions available to the Directors, which included deferring uncommitted capital expenditure. • We reviewed the adequacy of disclosures in the financial statements in respect of going concern against the requirements of the accounting standards and in light of the outcome of our work above.

OUR APPLICATION OF MATERIALITY

We apply the concept of materiality both in planning and performing our audit, and in evaluating the effect of misstatements. We consider materiality to be the magnitude by which misstatements, including omissions, could influence the economic decisions of reasonable users that are taken on the basis of the financial statements.

In order to reduce to an appropriately low level the probability that any misstatements exceed materiality, we use a lower materiality level, performance materiality, to determine the extent of testing needed. Importantly, misstatements below these levels will not necessarily be evaluated as immaterial as we also take account of the nature of identified misstatements, and the particular circumstances of their occurrence, when evaluating their effect on the financial statements as a whole.

Based on our professional judgement, we determined materiality for the financial statements as a whole and performance materiality as follows:

GROUP FINANCIAL STATEMENTS	2021 \$	2020 \$
Materiality (rounded down)	800,000	375,000
Basis for determining materiality	1.5% of Group total assets	2% of Group total assets
Rationale for the benchmark applied	Total Assets was determined as an appropriate basis as the principal focus of the Group remains fundamentally focussed on the advancement and development of its projects. As such, we consider the users of the financial statements will look to the statement of financial position and total assets of the Group in order to understand the level of investment. We reduced our threshold from 2% to 1.5% due to the increase in complexity of the Group's operations.	
Performance materiality	560,000	250,000
Basis for determining performance materiality	70% of Materiality	70% of Materiality
Rationale for the benchmark applied	The level of performance materiality was set after considering a number of factors including the expected value of known and likely misstatements and management's attitude towards proposed misstatements.	

Component materiality

We set materiality for each component of the Group based on the size and our assessment of the risk of material misstatement of that component. Component materiality was set at \$500,000 for each significant component. In the audit of each component, we further applied performance materiality levels 70% of the component materiality to our testing to ensure that the risk of errors exceeding component materiality was appropriately mitigated.

Reporting threshold

We agreed with the Audit Committee that we would report to them all individual audit differences in excess of \$16,000 (2020: \$7,500). We also agreed to report differences below this threshold that, in our view, warranted reporting on qualitative grounds.

OTHER INFORMATION

The directors are responsible for the other information. The other information comprises the information included in the Annual Report and Accounts other than the financial statements and our auditor's report thereon. Our opinion on the financial statements does not cover the other information and, except to the extent otherwise explicitly stated in our report, we do not express any form of assurance conclusion thereon. Our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the course of the audit, or otherwise appears to be materially misstated. If we identify such material inconsistencies or apparent material misstatements, we are required to determine whether this gives rise to a material misstatement in the financial statements themselves. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact.

We have nothing to report in this regard.

OTHER COMPANIES (GUERNSEY) LAW, 2008 REPORTING

Based on the responsibilities described below and our work performed during the course of the audit, we are required by the Companies (Guernsey) Law, 2008 and ISAs (UK) to report on certain opinions and matters as described below.

Matters on which we are required to report by exception	<p>We have nothing to report in respect of the following matters in relation to which the Companies (Guernsey) Law, 2008 requires us to report to you if, in our opinion:</p> <ul style="list-style-type: none"> • proper accounting records have not been kept by the Parent Company us; or • the financial statements are not in agreement with the accounting records; or • we have failed to obtain all the information and explanations which, to the best of our knowledge and belief, are necessary for the purposes of our audit.
--	--

RESPONSIBILITIES OF DIRECTORS

As explained more fully in the Directors responsibilities, the Directors are responsible for the preparation of the financial statements and for being satisfied that they give a true and fair view, and for such internal control as the Directors determine is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the Directors are responsible for assessing the Group's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Directors either intend to liquidate the Group to cease operations, or have no realistic alternative but to do so.

AUDITOR'S RESPONSIBILITIES FOR THE AUDIT OF THE FINANCIAL STATEMENTS

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs (UK) will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

Extent to which the audit was capable of detecting irregularities, including fraud

Irregularities, including fraud, are instances of non-compliance with laws and regulations. We design procedures in line with our responsibilities, outlined above, to detect material misstatements in respect of irregularities, including fraud. The extent to which our procedures are capable of detecting irregularities, including fraud is detailed below:

Based on our understanding of the Group and industry, we identified the principal risk of non-compliance with laws and regulations to be Guernsey Company and tax legislation, and we considered the extent to which non-compliance might have a material effect on the financial statements. As part of our audit work we reviewed and held meetings with the relevant internal Management to form our own opinion on the extent of the Group wide compliance.

Based on our assessment, we have assessed that the audit engagement team collectively had had the appropriate competence and capabilities in order to identify or recognize non-compliance with laws and regulations. Additionally, we have not been notified about any matters about non-compliance with laws and regulations and fraud by Management.

In addition, our testing also included, but was not limited to:

- Making enquiries of Management and the audit committee as to whether there are any known instances on non-compliance with laws and regulations;
- Holding discussions with management and the audit committee to understand the laws and regulations relevant to the Group. These included elements of financial reporting framework, Companies (Guernsey) Law, tax legislation and environmental regulations in the UK and Morocco;
- Performing targeted journal entry testing based on identified characteristics the audit team considered could be indicative of fraud, for example unusual account combinations, to detect possible irregularities and fraud;
- Performing a detailed review of the Group's year end adjusting entries and investigating any that appear unusual as to nature or amount;
- Testing consolidation entries to ensure consistency and appropriateness of the application of those entries to the financial statements;
- Assessing the judgements made by management when making key accounting estimates and judgements, and challenging management on the appropriateness of these judgements (refer to key audit matter over business combinations section of this report);
- Reviewing minutes from board meetings of those charged with governance to identify any instances of non-compliance with laws and regulations; and
- Communicating relevant identified laws and regulations and potential fraud risks to all engagement team members and remaining alert to any indications of fraud or non-compliance with laws and regulations throughout the audit.

Our audit procedures were designed to respond to risks of material misstatement in the financial statements, recognising that the risk of not detecting a material misstatement due to fraud is higher than the risk of not detecting one resulting from error, as fraud may involve deliberate concealment by, for example, forgery, misrepresentations or through collusion. There are inherent limitations in the audit procedures performed and the further removed non-compliance with laws and regulations is from the events and transactions reflected in the financial statements, the less likely we are to become aware of it.

A further description of our responsibilities is available on the Financial Reporting Council's website at: www.frc.org.uk/auditorsresponsibilities. This description forms part of our auditor's report.

USE OF OUR REPORT

This report is made solely to the Parent Company's members, as a body, in accordance with Section 262 of the Companies (Guernsey) Law 2008. Our audit work has been undertaken so that we might state to the Parent Company's members those matters we are required to state to them in an auditor's report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the Parent Company and the Parent Company's members as a body, for our audit work, for this report, or for the opinions we have formed.

Cash and cash equivalents at end of the year	19,406	3,740

The notes on pages 46-58 form part of these financial statements.

NOTES FORMING PART OF THE FINANCIAL STATEMENTS

FOR THE YEAR ENDED 31 DECEMBER 2021

1 GENERAL INFORMATION

Chariot Limited is a company incorporated in Guernsey with registration number 47532. The address of the registered office is Oak House, Hirzel Street, St Peter Port, Guernsey, GY1 2NP. The nature of the Company's operations and its principal activities are set out in the Report of the Directors and in the Technical Director's Review of Operations.

2 ACCOUNTING POLICIES

Basis of preparation

The financial statements have been prepared in accordance with UK adopted International Accounting Standards.

In accordance with the provisions of section 244 of the Companies (Guernsey) Law, 2008, the Group has chosen to only report the Group's consolidated position, hence separate Company only financial statements are not presented.

The financial statements are prepared under the historical cost accounting convention on a going concern basis.

Going concern

As at 31 December 2021 the Group had cash of US\$19.4 million, no debt and minimal licence commitments.

In June 2022 an equity fundraise completed which raised US\$29.5 million.

The Directors have reviewed the cash flow projection for the Group to consider if it has sufficient finance in place to meet its financial commitments for at least 12 months.

The Group has recently completed a successful appraisal drilling campaign at Anchois and is now funded to advance the engineering and design of the Anchois Gas Development, including FEED project, project financing, gas sales and updated reserves report, to reach FID. The Company continues to focus on partnering in both the Transitional Gas and Transitional Power business streams, and the Board has the reasonable expectation of generating future value and cash from this strategy. Based on these forecasts the Board has a reasonable expectation that the Group has adequate resources to continue in operational existence for the foreseeable future.

For these reasons, the Directors continue to adopt the going concern basis in preparing the Annual Report and Accounts.

New Accounting Standards

The following new standards and amendments to standards are mandatory for the first time for the Group for the financial year beginning 1 January 2021. The implementation of these standards and amendments to standards has had no material effect on the Group's accounting policies.

Standard	Effective year commencing on or after
Interest Rate Benchmark Reform — Phase 2 (Amendments to IFRS 9, IAS 39, IFRS 7, IFRS 4 and IFRS 16)	1 January 2021

Certain new standards and amendments to standards have been published that are mandatory for the Group's accounting periods beginning after 1 January 2022 or later years to which the Group has decided not to adopt early when early adoption is available.

The implementation of these standards and amendments is expected to have no material effect on the Group's accounting policies. These are:

Standard	Effective year commencing on or after
Annual Improvements 2018-2020 Cycle	1 January 2022*
IAS 16 Property, Plant and Equipment (Amendment – Proceeds before Intended Use)	1 January 2022*
IFRS 3 Business Combinations (Amendment – Reference to the Conceptual Framework)	1 January 2022*
IAS 37 Provisions, Contingent Liabilities and Contingent Assets (Amendment – Onerous Contracts – Cost of Fulfilling a Contract)	1 January 2022*

* Endorsed for use in the EU but not in the UK.

IFRS 16 – Leases

Under IFRS 16 lease liabilities are initially measured at the present value of the remaining lease payments and discounted using an incremental borrowing rate at the date of recognition. Associated right-of-use assets are measured at an amount equal to the lease liability adjusted for any prepaid or accrued lease payments.

Each lease payment is allocated between the liability and finance cost. The finance cost is charged to profit or loss over the lease period to produce a constant periodic rate of interest on the remaining balance of the liability for each period. The right-of-use asset is depreciated over the shorter of the asset's useful life and the lease term on a straight-line basis.

The Group has elected not to recognise right-of-use assets and liabilities for leases where the total lease term is less than or equal to 12 months, or for leases of low-value assets. Low-value assets comprise IT equipment and small items of office furniture. Payments associated with short-term leases and leases of low-value assets are recognised on a straight-line basis as an expense in profit or loss.

Further details on the lease liability can be found in note 16.

2 ACCOUNTING POLICIES CONT.

Exploration and evaluation assets

The Group accounts for exploration and evaluation costs in accordance with the requirements of IFRS 6 Exploration for and Evaluation of Mineral Resources.

Any costs incurred prior to obtaining the legal rights to explore an area are expensed immediately to the Income Statement. All expenditures relating to the acquisition, exploration and appraisal of oil and gas interests, including an appropriate share of directly attributable overheads, are recognised as exploration and evaluation assets and initially capitalised by reference to appropriate geographic areas. Costs recognised as exploration and evaluation assets are transferred to property, plant and equipment and classified as oil and gas assets when technical feasibility and commercial viability of extracting hydrocarbons is demonstrable.

Costs recognised as exploration and evaluation assets are tested for impairment whenever facts and circumstances suggest that they may be impaired. Where exploration wells have been drilled, consideration of the drilling results is made for the purposes of impairment of the specific well costs. If the results sufficiently enhance the understanding of the reservoir and its characteristics it may be carried forward when there is an intention to continue exploration and drill further wells on that target.

Where farm-in transactions occur which include elements of cash consideration for, amongst other things, the reimbursement of past costs, this cash consideration is credited to the relevant accounts within the geographic area where the farm-in assets were located. Any amounts of farm-in cash consideration in excess of the value of the historic costs in the geographic area are treated as a credit to the Consolidated Statement of Comprehensive Income.

Investment in power projects

The Group, through its subsidiary AEMP Essakane Solar SAS, holds a 10% investment in the Essakane solar project, Burkina Faso. This investment is recognised at fair value with any movement in fair value subsequently recognised in the Consolidated Statement of Comprehensive Income.

Further details on the investment in power projects can be found in note 11.

Inventories

The Group's share of any material and equipment inventories is accounted for at the lower of cost and net realisable value. The cost of inventories comprises all costs of purchase, costs of conversion and other costs incurred in bringing the inventories to their present location and condition.

Taxation

Income tax expense represents the sum of the current tax and deferred tax charge for the year.

Deferred tax is recognised on differences between the carrying amounts of assets and liabilities in the financial statements and the corresponding tax bases, and is accounted for using the balance sheet liability method. Deferred tax liabilities are recognised for all taxable temporary differences and deferred tax assets are recognised to the extent that it is probable that taxable profits will be available against which deductible temporary differences can be utilised.

The carrying amount of deferred tax assets is reviewed at each reporting date and reduced to the extent that it is no longer probable that sufficient taxable profits will be available to allow all or part of the asset to be recovered.

Deferred tax is calculated at the tax rates that have been enacted or substantively enacted and are expected to apply in the year when the liability is settled or the asset realised. Deferred tax is charged or credited to the Consolidated Statement of Comprehensive Income, except when it relates to items charged or credited directly to equity, in which case the deferred tax is also dealt with in equity.

Deferred tax assets and liabilities are offset when there is a legally enforceable right to set off current tax assets against current tax liabilities and when they relate to income taxes levied by the same taxation authority and the Group intends to settle its current tax assets and liabilities on a net basis.

Foreign currencies

Transactions in foreign currencies are translated into US Dollars at the exchange rate ruling at the date of the transaction. Monetary assets and liabilities denominated in foreign currencies are translated into US Dollars at the closing rates at the reporting date and the exchange differences are included in the Consolidated Statement of Comprehensive Income. The functional and presentational currency of the parent and all Group companies is the US Dollar.

Property, plant and equipment and depreciation

Property, plant and equipment are stated at cost or fair value on acquisition less depreciation and impairment. Depreciation is provided on a straight line basis at rates calculated to write off the cost less the estimated residual value of each asset over its expected useful economic life. The residual value is the estimated amount that would currently be obtained from disposal of the asset if the asset were already of the age and in the condition expected at the end of its useful life.

Property, plant and equipment are depreciated using the straight line method over their estimated useful lives over a range of 3-5 years.

The carrying value of property, plant and equipment is assessed annually and any impairment charge is charged to the Consolidated Statement of Comprehensive Income.

Goodwill

The Group tests goodwill annually for impairment, or more frequently if there are indications that goodwill might be impaired.

2 ACCOUNTING POLICIES CONT.

Share based payments

Where equity settled share awards are awarded to employees or Directors, the fair value of the awards at the date of grant is charged to the Consolidated Statement of Comprehensive Income over the vesting period. Non-market vesting conditions are taken into account by adjusting the number of equity instruments expected to vest at each balance sheet date so that, ultimately, the cumulative amount recognised over the vesting period is based on the number of awards that eventually vest. Market vesting conditions are factored into the fair value of the awards granted. As long as all other vesting conditions are satisfied, a charge is made irrespective of whether the market vesting conditions are satisfied. The cumulative expense is not adjusted for failure to achieve a market vesting condition.

Where the terms and conditions of awards are modified before they vest, the increase in the fair value of the awards, measured immediately before and after the modification, is also charged to the Consolidated Statement of Comprehensive Income over the remaining vesting period.

Where shares already in existence have been given to employees by shareholders, the fair value of the shares transferred is charged to the Consolidated Statement of Comprehensive Income and recognised in reserves as Contributed Equity.

Basis of consolidation

Where the Company has control over an investee, it is classified as a subsidiary. The Company controls an investee if it has power over the investee and it is exposed to variable returns from the investee and it has the ability to use its power to affect those variable returns. Control is reassessed whenever facts and circumstances indicate that there may be a change in any of these elements of control. The consolidated financial statements present the results of the Company and its subsidiaries ("the Group") as if they formed a single entity. Intercompany transactions and balances between the Group companies are therefore eliminated in full.

Business combinations

Acquisitions of businesses are accounted for using the acquisition method. The consideration transferred in a business combination is measured at fair value, which is calculated as the sum of the acquisition-date fair values of assets transferred by the Group, liabilities incurred by the Group to the former owners of the acquiree and the equity interest issued by the Group in exchange for control of the acquiree. Acquisition-related costs are recognised in profit or loss as incurred.

Trade and other receivables

Trade and other receivables are stated initially at fair value and subsequently at amortised cost.

Financial instruments

The Group's financial assets consist of a bank current account or short-term deposits at variable interest rates and other receivables. Any interest earned is accrued and classified as finance income.

The Group's financial liabilities consist of trade and other payables. The trade and other payables are stated initially at fair value and subsequently at amortised cost.

Joint operations

Joint operations are those in which the Group has certain contractual agreements with other participants to engage in joint activities that do not create an entity carrying on a trade or business on its own. The Group includes its share of assets, liabilities and cash flows in joint arrangements, measured in accordance with the terms of each arrangement, which is usually pro rata to the Group's interest in the joint operations. The Group conducts its exploration, development and production activities jointly with other companies in this way.

Critical accounting estimates and judgements

The Group makes estimates and assumptions regarding the future. Estimates and judgements are continually evaluated based on historical experiences and other factors, including expectations of future events that are believed to be reasonable under the circumstances. In the future, actual experience may deviate from these estimates and assumptions. If these estimates and assumptions are significantly over or under stated, this could cause a material adjustment to the carrying amounts of assets and liabilities within the next financial year. The areas where this could impact the Group are:

a) Areas of judgement

i. Recoverability of exploration and evaluation assets

Expenditure is capitalised as an intangible asset by reference to appropriate geographic area and is assessed for impairment when management assesses that circumstances suggest that the carrying amount may exceed its recoverable value.

ii. Treatment of farm-in transactions

All farm-in transactions are reflected in these financial statements in line with the accounting policy on Exploration and Evaluations assets. Farm-in transactions are recognised in the financial statements if they are legally complete during the year under review or, if all key commercial terms are agreed and legal completion is only subject to administrative approvals which are obtained within the post balance sheet period or are expected to be obtained within a reasonable timeframe thereafter.

iii. Business combinations

The assessment of the purchase price allocation in the acquisition of AEMP included a number of judgements and estimates exercised by management including assessment of fair value of the investment in the Essakane power project and goodwill.

3 SEGMENTAL ANALYSIS

With the acquisition of AEMP and updated strategy, the Group has three reportable segments being transitional gas, transitional power and corporate costs (2020: two being exploration and appraisal and corporate costs). The operating results of each of these segments are regularly reviewed by the Board of Directors in order to make decisions about the allocation of resources and assess their performance.

7 INVESTMENTS

The Company's wholly owned subsidiary undertakings at 31 December 2021 and 31 December 2020, excluding dormant entities, were:

Subsidiary undertaking	Principal activity	Country of incorporation
Chariot Oil & Gas Investments (Namibia) Limited	Holding company	Guernsey
Chariot Oil & Gas Investments (Morocco) Limited	Oil and gas exploration	Guernsey
Chariot Oil and Gas Statistics Limited	Service company	UK
Enigma Oil & Gas Exploration (Proprietary) Limited ¹	Oil and gas exploration	Namibia
Chariot Oil & Gas Investments (Brazil) Limited	Holding company	Guernsey
Chariot Brasil Petroleo e Gas Ltda	Oil and gas exploration	Brazil
Chariot Oil & Gas Finance (Brazil) Limited ¹	Service company	Guernsey
Chariot Oil & Gas Holdings (Morocco) Limited	Oil and gas exploration	UK
Chariot Rissana Limited	Oil and gas exploration	UK
Chariot Transitional Power Limited	Holding company	UK
AEMP Essakane Solar SAS ¹	Holding company	France
Africa Energy Management Platform ¹	Service company	Mauritius

¹ Indirect shareholding of the Company.

8 TAXATION

The Company is tax resident in the UK, however no tax charge arises due to taxable losses for the year (31 December 2020: US\$Nil).

No taxation charge arises in Morocco or the group subsidiaries as they have recorded taxable losses for the year (31 December 2020 in Brazil: US\$1,000)

There was no deferred tax charge or credit in either period presented.

Factors affecting the tax charge for the current year

The reasons for the difference between the actual tax charge for the year and the standard rate of corporation tax in the UK applied to losses for the year are as follows:

	31 December 2021 US\$000	31 December 2020 US\$000
Tax reconciliation		
Loss on ordinary activities for the year before tax	(6,960)	(70,619)
Loss on ordinary activities at the standard rate of corporation tax in the UK of 19% (31 December 2020: 19%)	(1,322)	(13,418)
Non-deductible expenses	212	12,882
Difference in tax rates in other jurisdictions	–	–
Deferred tax effect not recognised	1,110	537
Total taxation charge	–	1

The Company had tax losses carried forward on which no deferred tax asset is recognised. Deferred tax not recognised in respect of losses carried forward total US\$8.7 million (31 December 2020: US\$7.6 million). Deferred tax assets were not recognised as there is uncertainty regarding the timing of future profits against which these assets could be utilised.

9 LOSS PER SHARE

The calculation of basic loss per Ordinary share is based on a loss of US\$6,960,000 (31 December 2020: loss of US\$70,620,000) and on 519,854,783 Ordinary shares (31 December 2020: 379,349,854) being the weighted average number of Ordinary shares in issue during the year. Potentially dilutive share awards are detailed in note 21, however these do not have any dilutive impact as the Group reported a loss for the year, consequently a separate diluted loss per share has not been presented.

NOTES FORMING PART OF THE FINANCIAL STATEMENTS CONT.
FOR THE YEAR ENDED 31 DECEMBER 2021

10 EXPLORATION AND EVALUATION ASSETS

	31 December 2021 US\$000	31 December 2020 US\$000
Net book value brought forward	12,822	78,264
Additions	18,928	1,224
Impairment	–	(66,666)
Net book value carried forward	31,750	12,822

As at 31 December 2021 the net book value of the Moroccan geographic area is US\$31.8 million (31 December 2020: US\$12.8 million).

In the prior year the activities in Namibia and Brazil were assessed as non-core with substantive expenditure not planned in the near term, and as such full impairments were recorded against each respective geographic area.

11 BUSINESS COMBINATION

On 25 June 2021 the Company completed the acquisition of the business of Africa Energy Management Platform ("AEMP") including the related 10% holding in the Essakane project. AEMP is a renewable and hybrid energy project developer with an ongoing strategic partnership with Total Eren, a leading global player in renewable energy, and qualifies as a business as defined in IFRS 3. AEMP was acquired as an extension of the updated strategy to have a positive impact on the environment, the countries and the communities in which the Company operates.

Consideration and fair value of assets and liabilities acquired

As initial consideration for the acquisition the Company paid US\$0.1 million in cash and issued 9,196,926 new ordinary shares at a value of US\$0.7 million. Deferred consideration representing 1,982,096 new ordinary shares is payable dependent on certain project pipeline targets being met, which has been recognised in equity. The consideration shares were valued at US\$0.07 (5.16p) being the close price on the day preceding completion of the acquisition.

At acquisition, total identifiable assets and liabilities assumed were US\$0.5 million, the majority of which was attributable to the 10% project equity held in the operational Essakane power project which was recognised at fair value based on assessment of the underlying cash flows. The balance of the consideration of US\$0.4 million has been allocated to goodwill, indicative of intellectual property, management team and customer relationships acquired. None of the goodwill is expected to be deductible for income tax purposes. No impairment of the investment in power projects or goodwill was identified in the period from acquisition to 31 December 2021. If the deal had been completed at the start of 2021 the impact on revenue and profit of the combined Group would be less than US\$10,000.

The amounts recognised in respect of the identified assets acquired and liabilities assumed are set out in the table below.

	25 June 2021 US\$000
Investment in power projects	450
Trade receivables	5
Cash	69
Trade payables	(12)
Total identifiable assets acquired and liabilities assumed	512
Goodwill	380
Total consideration	892
Satisfied by:	
Cash	90
New ordinary shares	660
Deferred consideration payable in shares to be issued	142
Total consideration transferred	892

Contingent payments

Further contingent payments representing a maximum of 3,964,192 new ordinary shares are payable to key members of the AEMP team dependent on their retention and certain project pipeline targets being met and will be recognised as share based payments in the Consolidated Statement of Comprehensive Income over the retention period. See note 21 for further details.

12 PROPERTY, PLANT AND EQUIPMENT

	Fixtures, fittings and equipment 31 December 2021 US\$000	Fixtures, fittings and equipment 31 December 2020 US\$000

19 RELATED PARTY TRANSACTIONS

Key management personnel comprises the Directors and details of their remuneration are set out in note 5 and the Directors' Remuneration Report.

Magna Capital LDA (of which Adonis Pouroulis, Acting CEO, has a substantial interest, underwrote an equity fundraising in June 2021 to ensure that the total fundraising equated to approximately US\$23 million. The underwriting commitment was fulfilled by subscription of shares after the balance sheet date and the Company received proceeds totalling US\$5 million, as detailed in note 23. The underwriting commitment constitutes a related party transaction.

Kinsella Consulting Limited, a company of which Adonis Pouroulis is a Director, incurred costs on behalf of Chariot Limited for which it was reimbursed during the year of US\$8,813 (31 December 2020: US\$Nil). The amount outstanding as at 31 December 2021 was US\$Nil (31 December 2020: US\$Nil).

There were no related party transactions during the year ended 31 December 2020.

20 FINANCIAL INSTRUMENTS

The Board of Directors determine, as required, the degree to which it is appropriate to use financial instruments or other hedging contracts or techniques to mitigate risk. Throughout the year ending 31 December 2021, no trading in financial instruments was undertaken (31 December 2020: US\$Nil). There is no material difference between the book value and fair value of the Group cash balances, short-term receivables and payables.

Market risk

Market risk arises from the Group's use of interest bearing and foreign currency financial instruments. It is the risk that future cash flows of a financial instrument will fluctuate because of changes in interest rates (interest rate risk) and foreign exchange rates (currency risk). Throughout the year, the Group has held surplus funds on deposit, principally with its main relationship bank Barclays, on fixed short-term deposits. The credit ratings of the main relationship bank the Group holds cash with do not fall below A or equivalent. The Group does not undertake any form of speculation on long-term interest rates or currency movements, therefore it manages market risk by maintaining a short-term investment horizon and placing funds on deposit to optimise short-term yields where possible but, moreover, to ensure that it always has sufficient cash resources to meet payables and other working capital requirements when necessary. As such, market risk is not viewed as a significant risk to the Group. The Directors have not disclosed the impact of interest rate sensitivity analysis on the Group's financial assets and liabilities at the year-end as the risk is not deemed to be material.

This transactional risk is managed by the Group holding the majority of its funds in US Dollars to recognise that US Dollars is the trading currency of the industry, with an appropriate balance maintained in Sterling, Euro and Moroccan Dirham to meet other non-US Dollar industry costs and ongoing corporate and overhead commitments.

At the year end, the Group had cash balances of US\$19.4 million (31 December 2020: US\$3.7 million) as detailed in note 15.

Other than the non-US Dollar cash balances described in note 15, no other material financial instrument is denominated in a currency other than US Dollars. A 10% adverse movement in exchange rates would lead to a foreign exchange loss of US\$380,000 and a 10% favourable movement in exchange rates would lead to a corresponding gain; the effect on net assets would be the same as the effect on profits (31 December 2020: US\$190,000).

Capital

In managing its capital, the Group's primary objective is to maintain a sufficient funding base to enable it to meet its working capital and strategic investment needs. The Group currently holds sufficient capital to meet its ongoing needs for at least the next 12 months.

Liquidity risk

The Group's practice is to regularly review cash needs and to place excess funds on fixed term deposits. This process enables the Group to optimise the yield on its cash resources whilst ensuring that it always has sufficient liquidity to meet payables and other working capital requirements when these become due.

The Group has sufficient funds to continue operations for the forthcoming year and has no perceived liquidity risk.

Credit risk

The Group's policy is to perform appropriate due diligence on any party with whom it intends to enter into a contractual arrangement. Where this involves credit risk, the Group will put in place measures that it has assessed as prudent to mitigate the risk of default by the other party. This could consist of instruments such as bank guarantees and parent company guarantees.

As such, the Group has not put in place any particular credit risk measures in this instance as the Directors view the risk of default on any payments due from the joint venture partner as being very low.

21 SHARE BASED PAYMENTS

Long Term Incentive Scheme ("LTIP")

The plan provides for the awarding of shares to employees and Directors for nil consideration. The award will lapse if an employee or Director leaves employment.

Shares granted when an individual is an employee will vest in equal instalments over a three year period from the grant date and shares granted when an individual is a Director or otherwise specified will vest three years from the end of the year or the period to which the award relates.

The Group recognised a charge under the plan for the year to 31 December 2021 of US\$533,000 (31 December 2020: US\$200,000).

The following table sets out details of all outstanding share awards under the LTIP:

	31 December 2021 Number of awards	31 December 2020 Number of awards
Outstanding at beginning of the year	7,401,780	25,000,645
Granted during the year	20,841,085	5,431,712
Shares issued for no consideration during the year	–	(20,835,037)
Lapsed during the year	–	(2,195,540)
Outstanding at the end of the year	28,242,865	7,401,780
Exercisable at the end of the year	7,379,562	6,044,990

Non-Executive Directors' Restricted Share Unit Scheme ("RSU")

The plan provides for the awarding of shares to Non-Executive Directors for nil consideration. An award can be Standalone or Matching.

Standalone share awards are one-off awards to Non-Executive Directors which will vest in equal instalments over a three year period and will lapse if not exercised within a fixed period on stepping down from the Board.

Matching share awards will be granted equal to the number of existing Chariot shares purchased by the Non-Executive Director in each calendar year capped at the value of their gross annual fees for that year. The shares will vest in equal instalments over a three year period and will lapse if not exercised prior to stepping down from the Board or if the original purchased shares are sold prior to the vesting of the relevant Matching award. Any potential Matching awards not granted in a calendar year shall be forfeited and shall not roll over to subsequent years.

The Group recognised a charge under the plan for the year to 31 December 2021 of US\$142,000 (31 December 2020: US\$22,000).

The following table sets out details of all outstanding share awards under the RSU:

	31 December 2021 Number of awards	31 December 2020 Number of awards
Outstanding at beginning of the year	2,839,875	2,839,875
Granted during the year	5,915,281	–
Outstanding at the end of the year	8,755,156	2,839,875
Exercisable at the end of the year	2,623,568	2,407,860

Post-acquisition share based payment charge

Contingent payments representing a maximum of 3,964,192 new ordinary shares are payable to key members of the AEMP team dependent on their retention and certain project pipeline targets being met and will be recognised as share based payments in the Consolidated Statement of Comprehensive Income over the retention period. The Group recognised a charge of US\$85,000 in the year to 31 December 2021.

22 CONTINGENT LIABILITIES

From 30 December 2011 the Namibian tax authorities introduced a withholding tax of 25% on all services provided by non-Namibian entities which are received and paid for by Namibian residents. From 30 December 2015 the withholding tax was reduced to 10%. As at 31 December 2021, based upon independent legal and tax opinions, the Group has no withholding tax liability (31 December 2020: US\$Nil). Any subsequent exposure to Namibian withholding tax will be determined by how the relevant legislation evolves in the future and the contracting strategy of the Group.

23 EVENTS AFTER THE BALANCE SHEET DATE

The Directors consider these events to be non-adjusting post balance sheet events.

a) Significant gas discovery at Anchois-2 well

On 10 January 2022 the Company announced a significant gas discovery at the Anchois-2 gas appraisal and exploration well in the Lixus Offshore licence, Morocco. On 31 March 2022 the Company announced an upgrade to the net gas pay estimates previously announced and confirmed excellent quality gas with further analysis ongoing to understand the positive impact on gas resources.

b) Issue of Underwriting Shares (the "Underwriting Commitment")

Magna Capital LDA (of which Adonis Pouroulis, Acting CEO, has a substantial interest) underwrote the June 2021 equity fundraising to ensure the total fundraising equated to approximately US\$23 million. Accordingly, 33,742,396 new Ordinary shares were admitted on 31 January 2022 and 33,742,396 new Ordinary shares were admitted on 3 March 2022 and the Company received proceeds totalling US\$5 million. The Underwriting Commitment constitutes a related party transaction.

c) Award of Rissana Offshore licence ("Rissana")

On 28 February 2022 the Company announced that a wholly owned subsidiary of Chariot Limited had been formally awarded a 75% interest and operatorship of the Rissana licence, Morocco in partnership with the Office National des Hydrocarbures et des Mines ("ONHYM") which holds a 25% carried interest.

d) Placing, subscription and open offer (the "Fundraising")

On 10 June 2022 the Company announced the approval by shareholders at a General Meeting of an equity Fundraising for 130,930,606 new Ordinary Shares at a price of 18 pence per share. The new Ordinary Shares were admitted and the Company received gross proceeds totalling US\$29.5 million.
